

淺談大腸手術跟造口

台南市立醫院

GS 周易韋

名詞釋義

- Stomy: 做造口的這個”術式”
- Stoma: 指“造口”本身

Stoma的種類

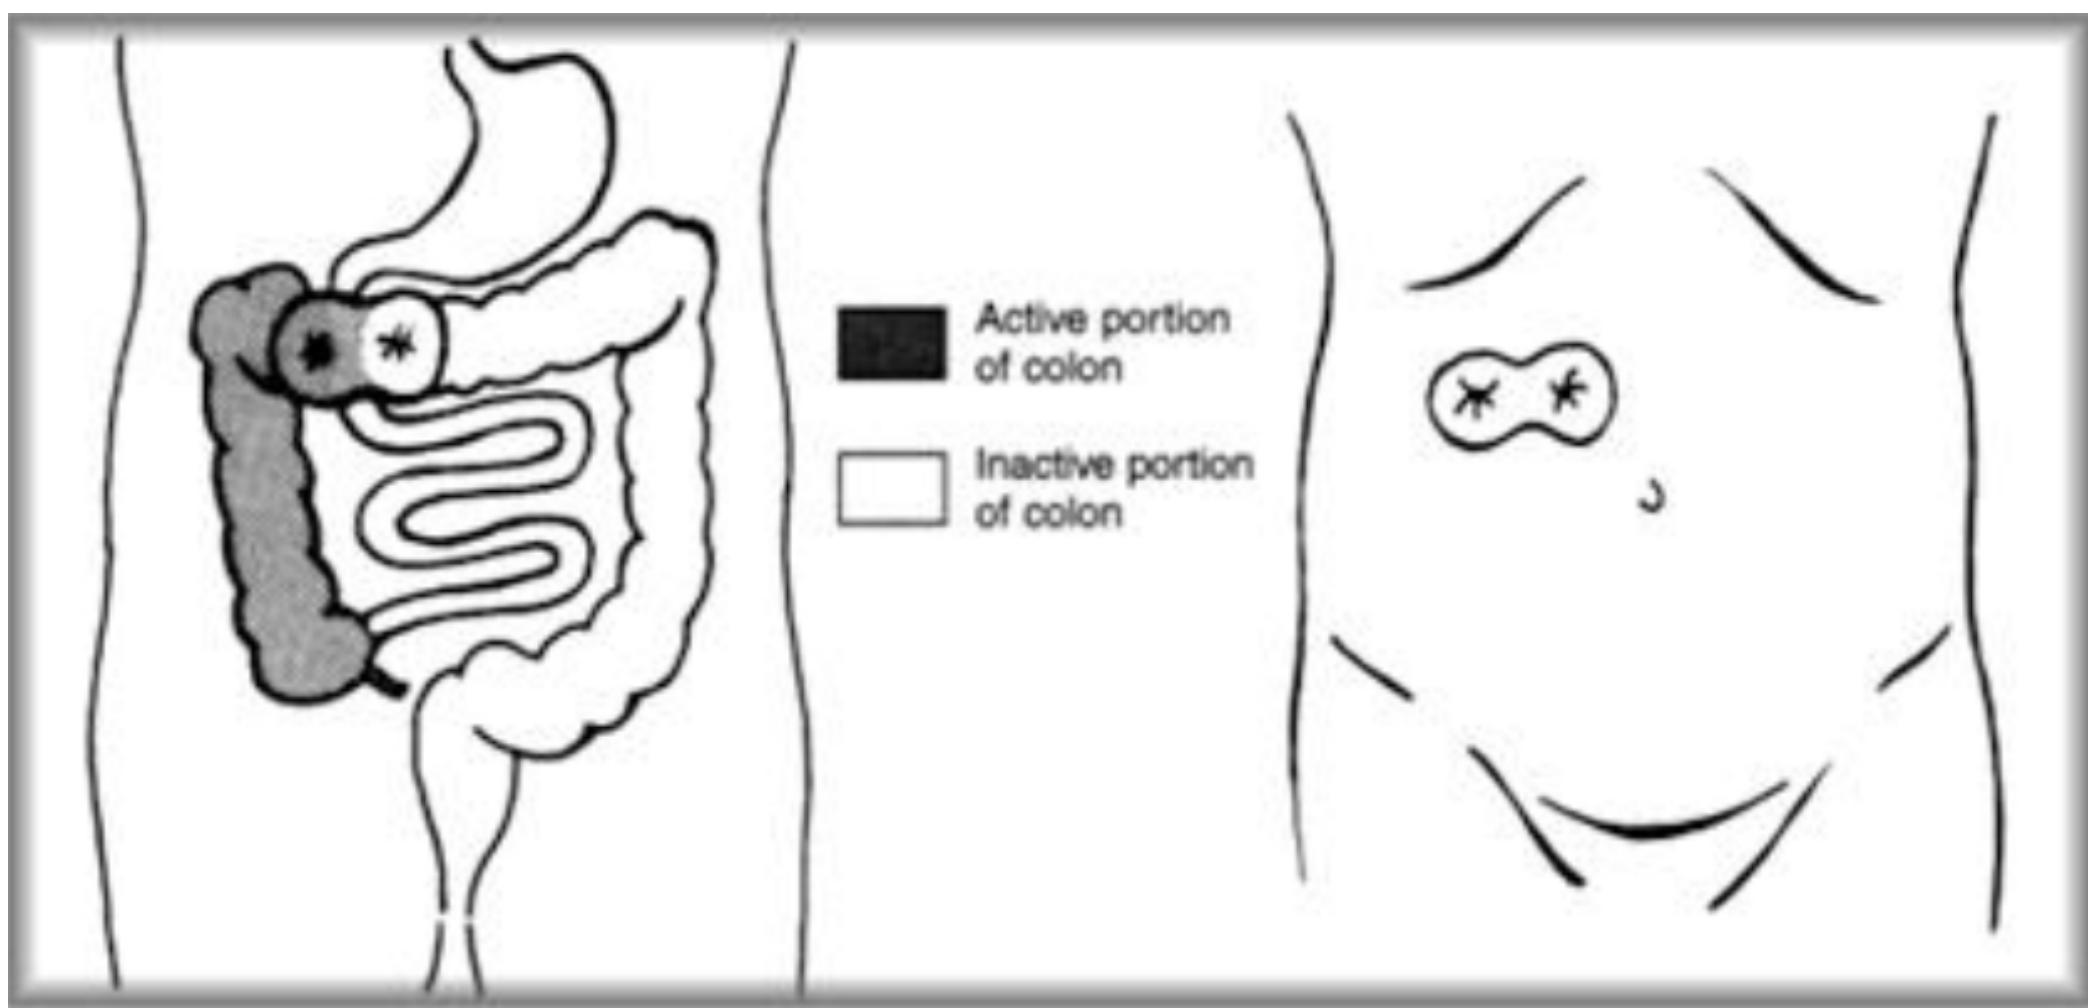

T-loop colostoma

End-colostoma

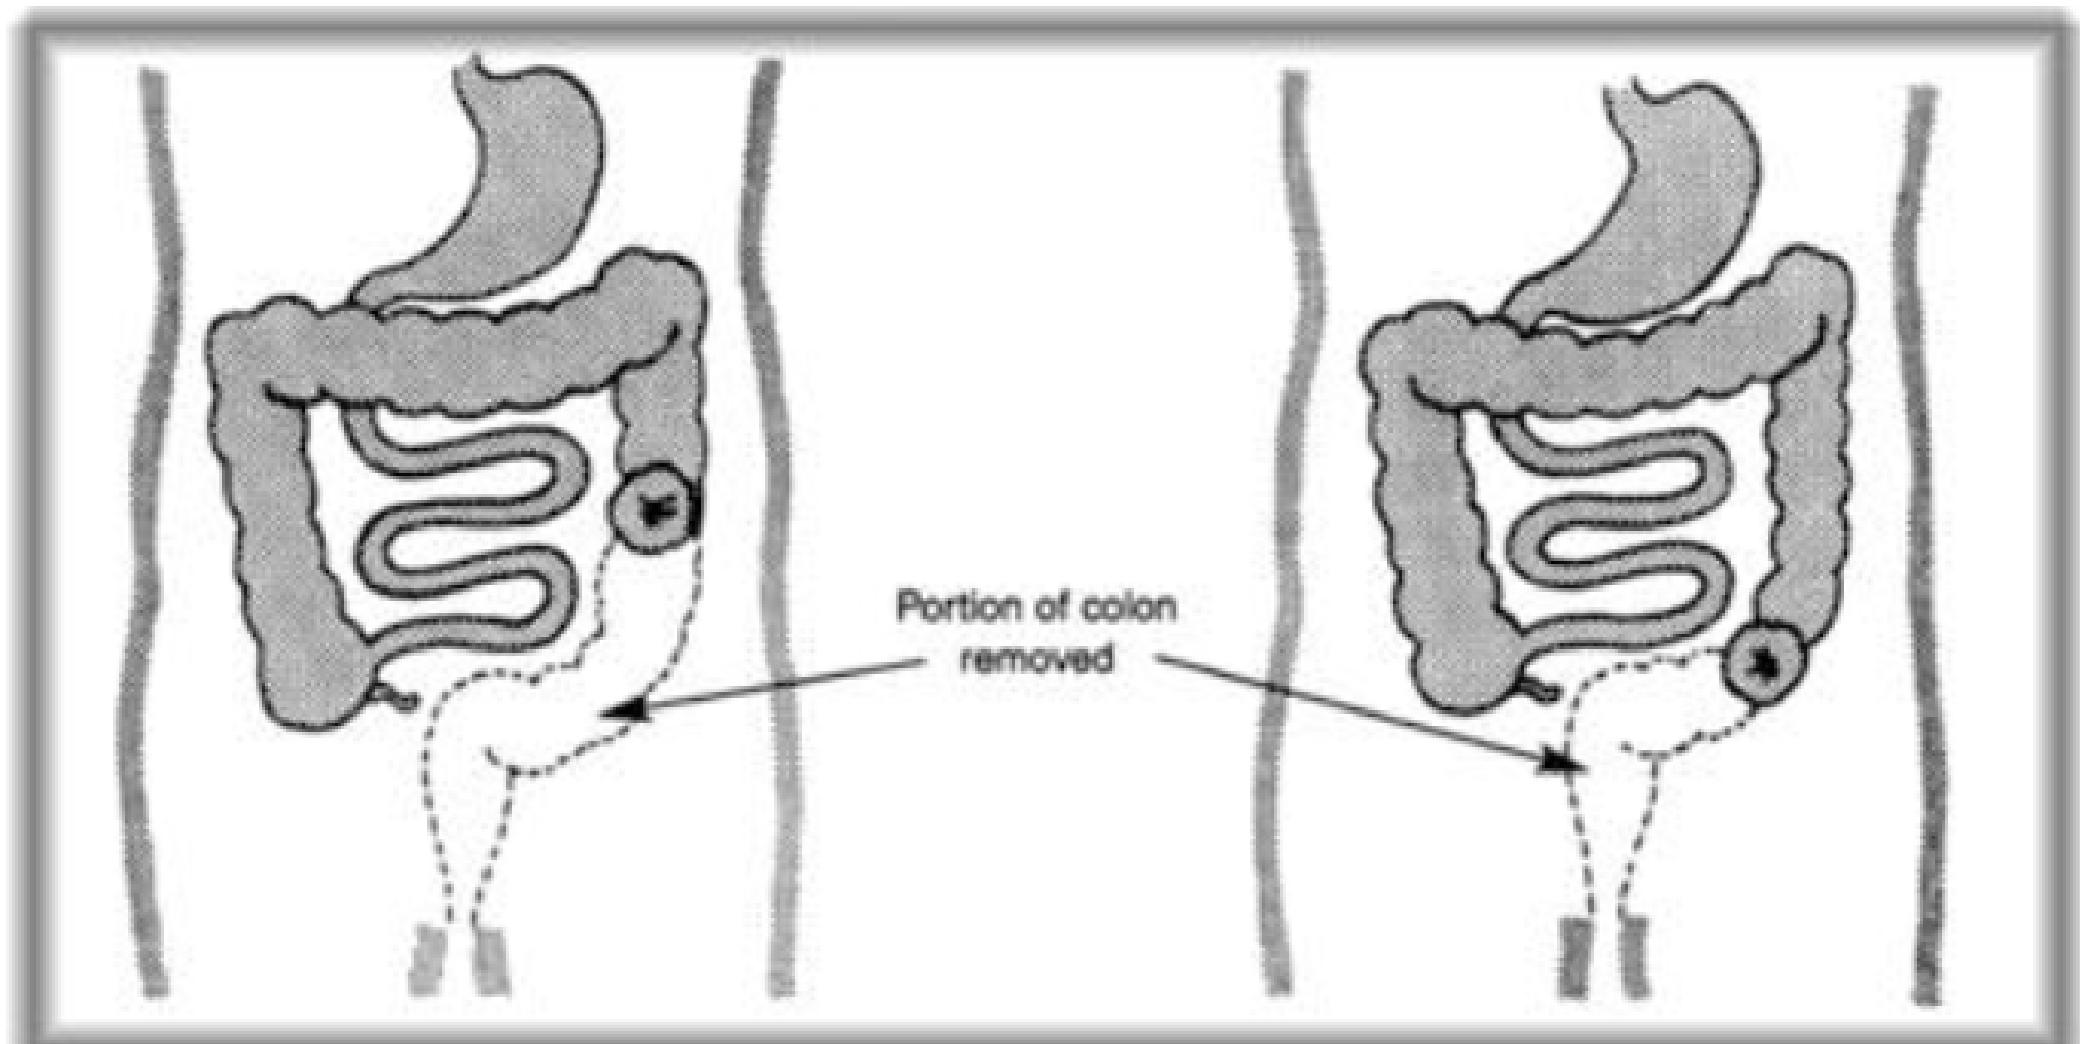

Double barrel colostoma

Ileostoma

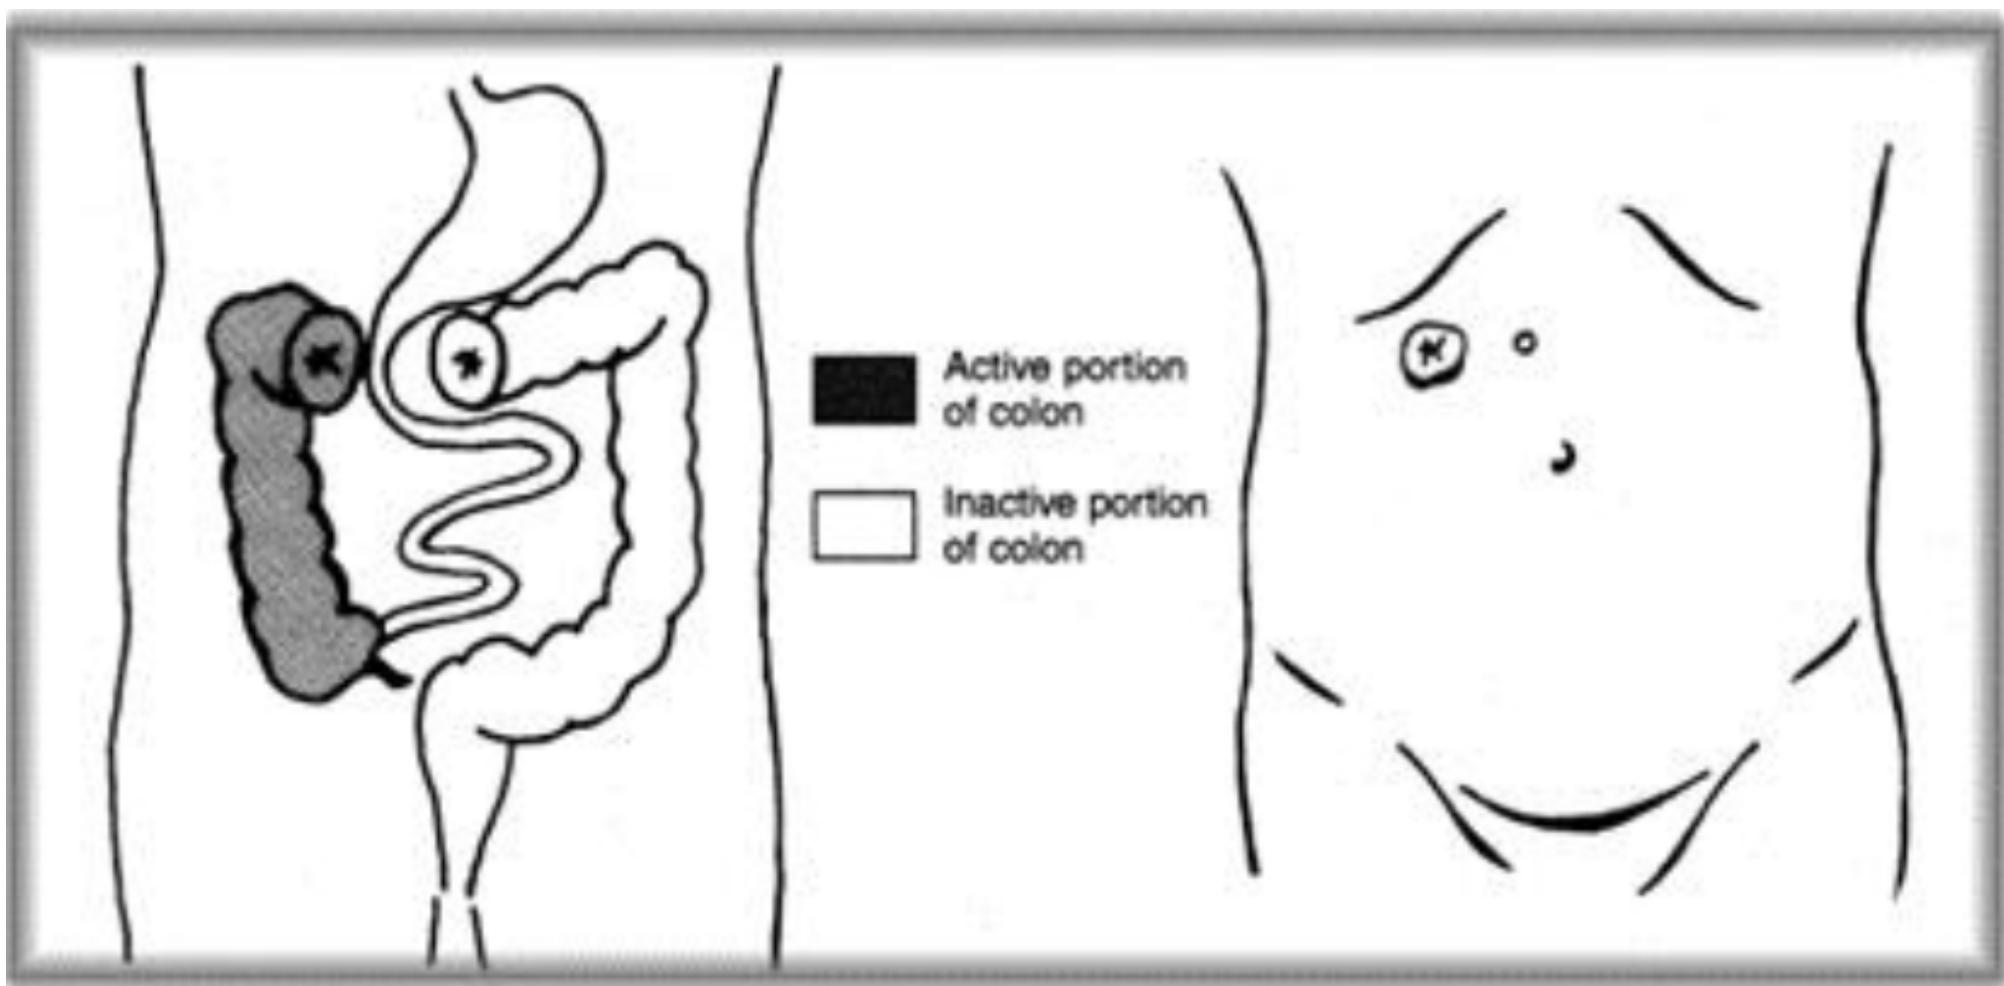

T-loop colostoma

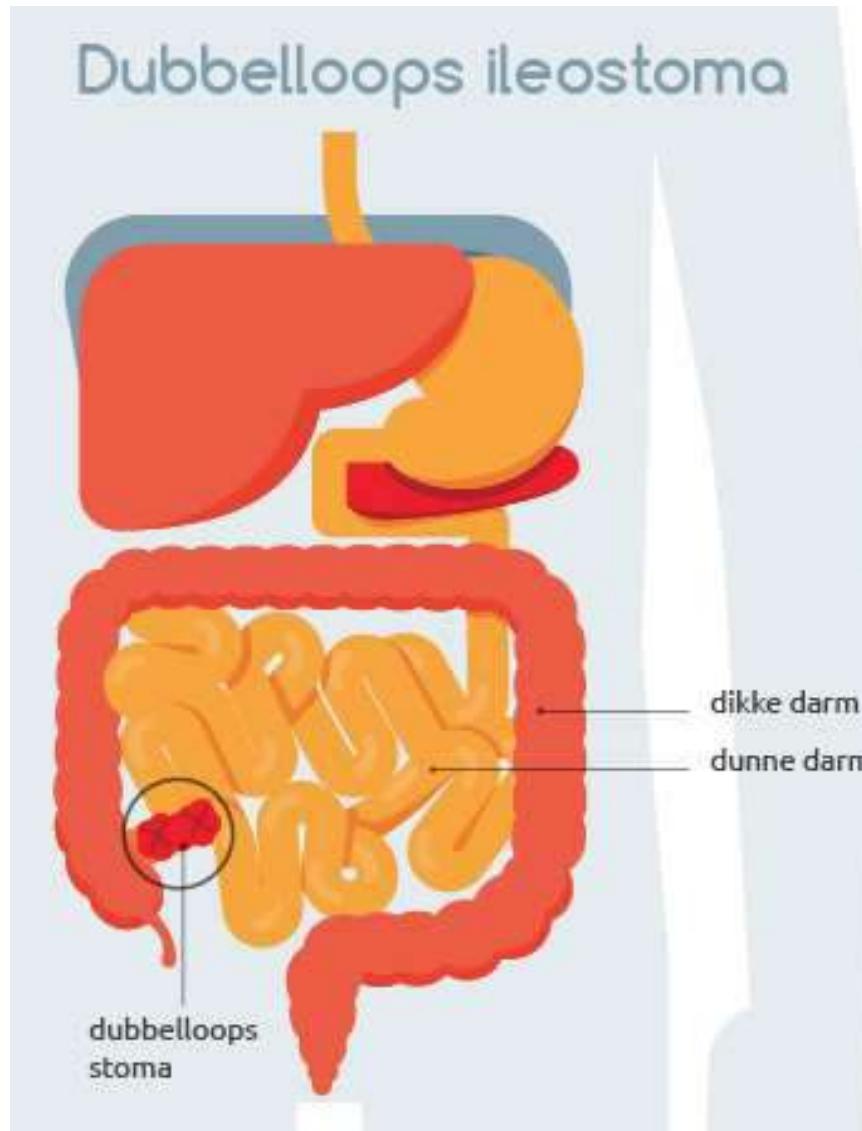

End-colostoma

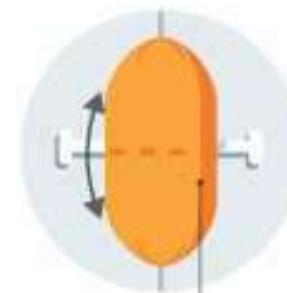

Double barrel colostoma

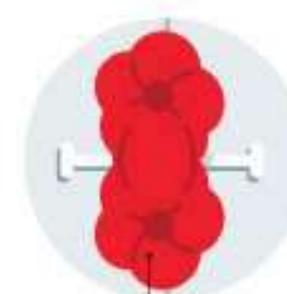

Loop ileostoma

Een stukje darm (lis) wordt door de buikwand naar buiten geleid.

De darmlis rust (tijdelijk) op een kunststofstaafje/huidbruggetje.

De darmlis wordt in de lengte opengesneden, omgevouwen en aan de huid vastgehecht.

End
stoma

Loop
stoma

Two stomas

Loop ileostoma vs. Loop colostoma

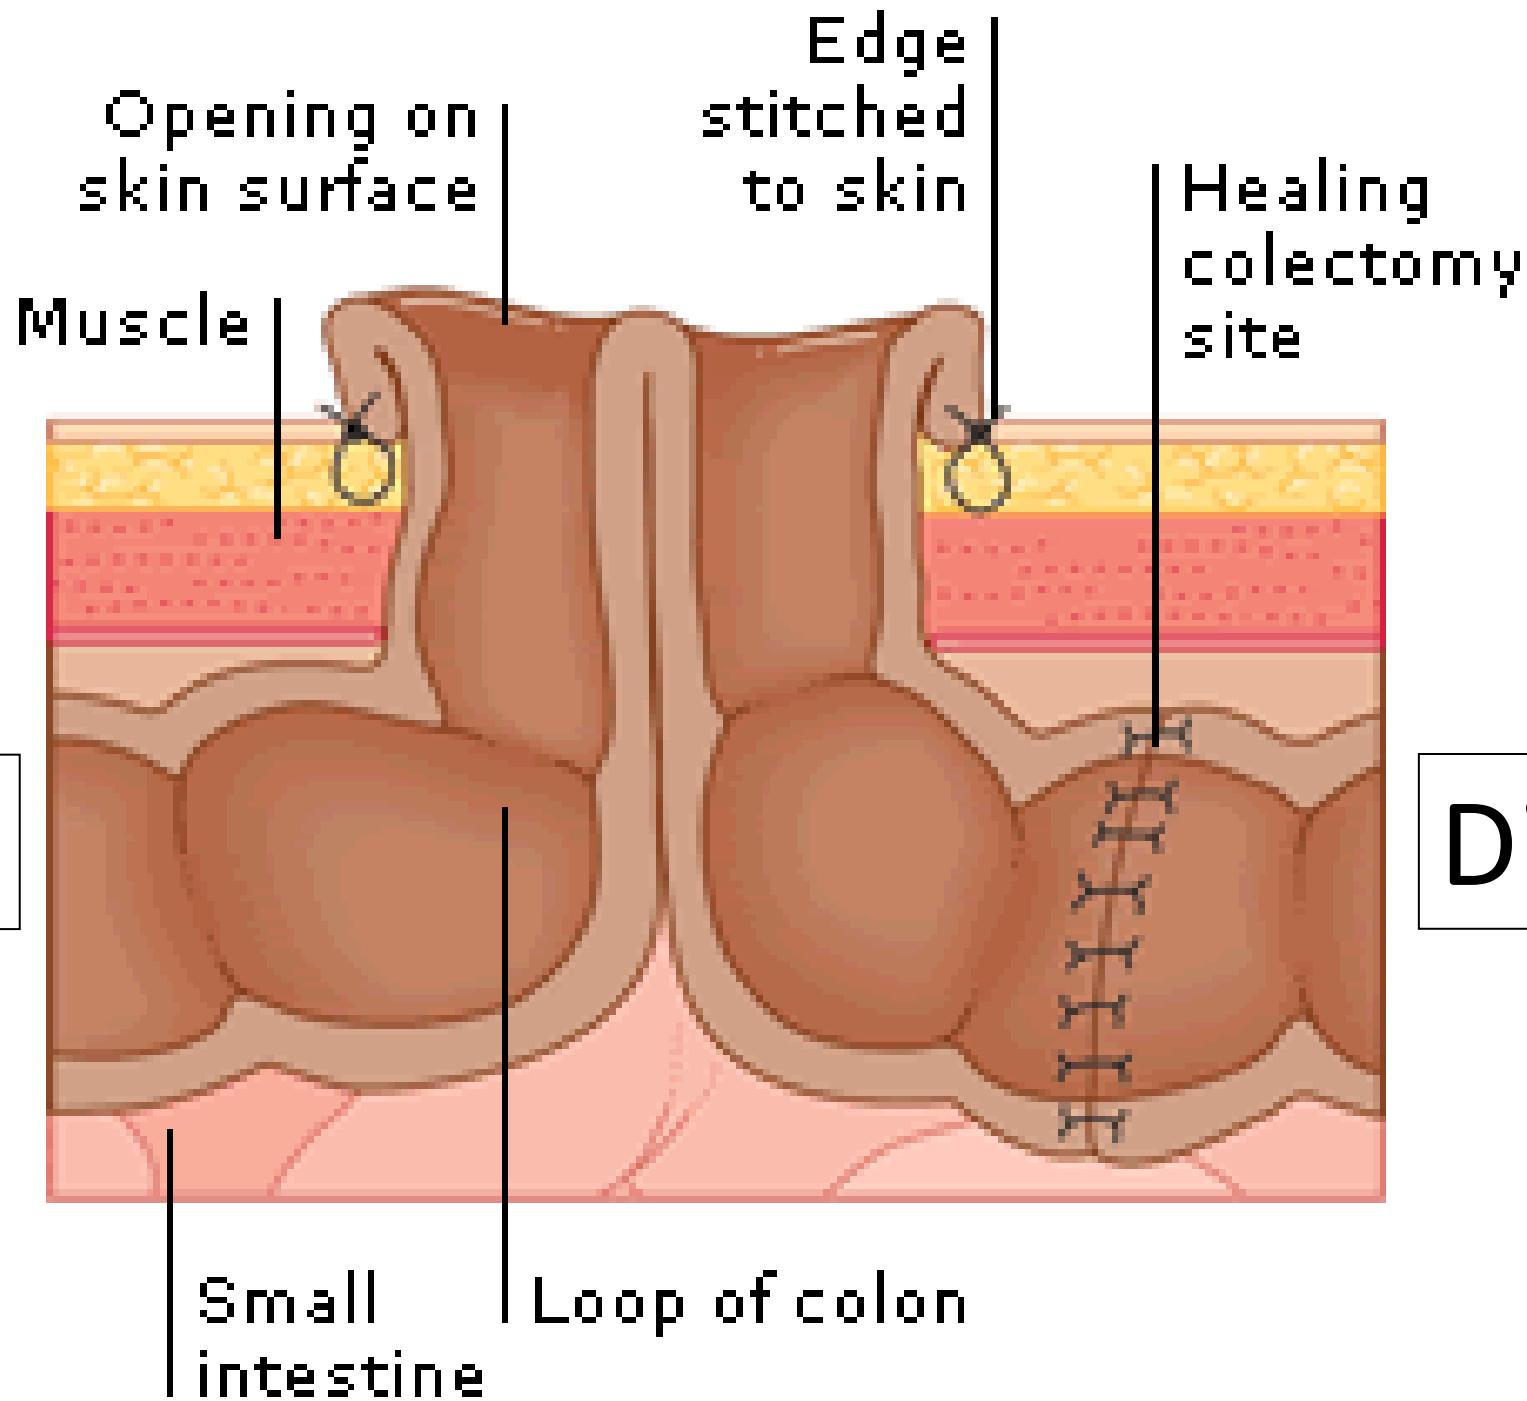

Ileostoma	Colostoma
<p>分泌量多, 液體狀, bile色 ➤>700-800mL/day, 動輒破1000以上 ➤容易電解質不平衡</p>	<p>分泌量很少, 已經是糞便 ➤更換次數少, 比較好照顧 ➤越近端則糞便越液狀, 越遠端則糞便越固體狀</p>
<p>Decompression效果差 ➤因為有ileo-cecal valve ➤術後保護吻合口多</p>	<p>Decompression效果好</p>
<p>手術較簡單 ➤小腸在腹腔中是浮動的</p>	<p>手術較困難 ➤大腸相對比較固定, 且很漲的時候手術不易</p>

為什麼要有stoma?

Afraid of leakage !!!!!

Proximal

Distal

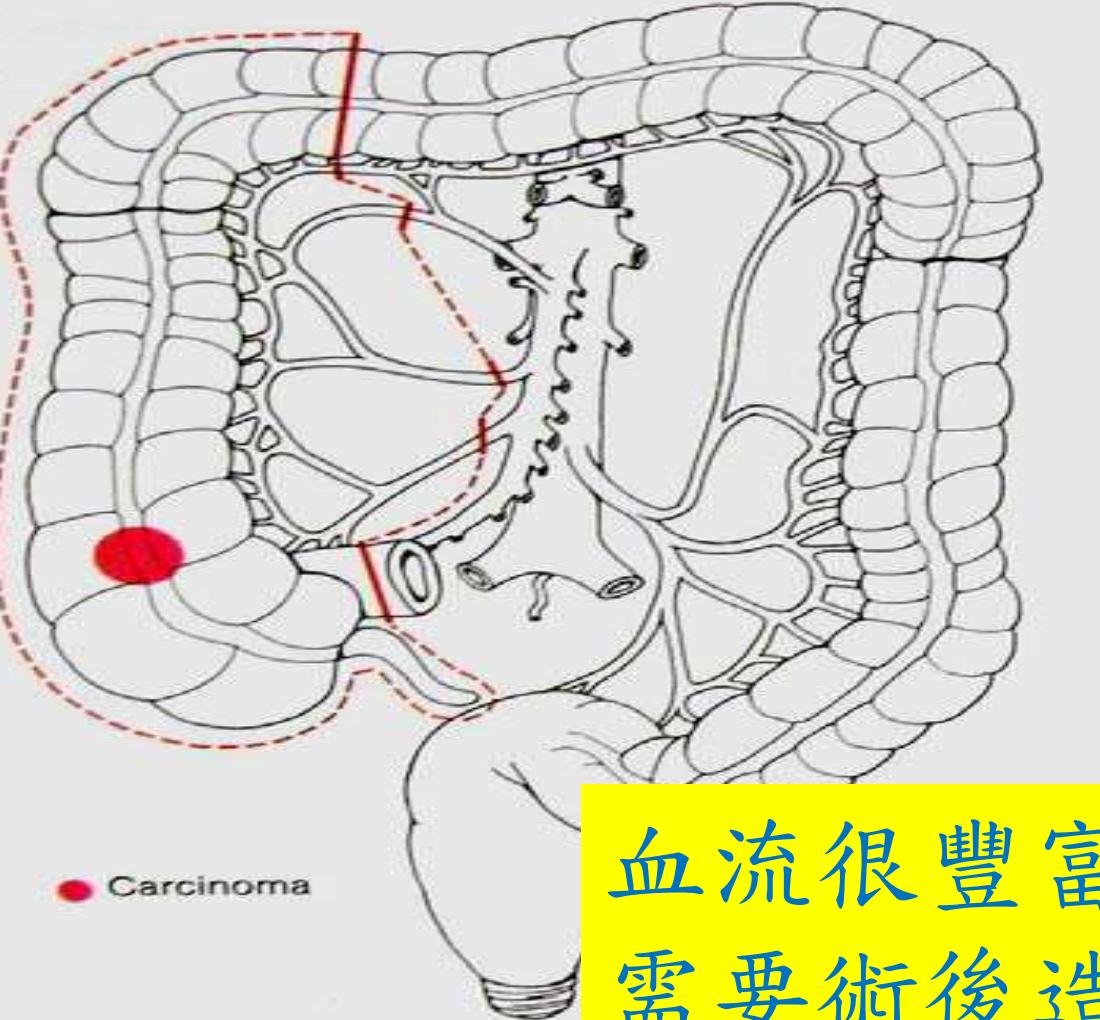

考慮需要stoma的因素

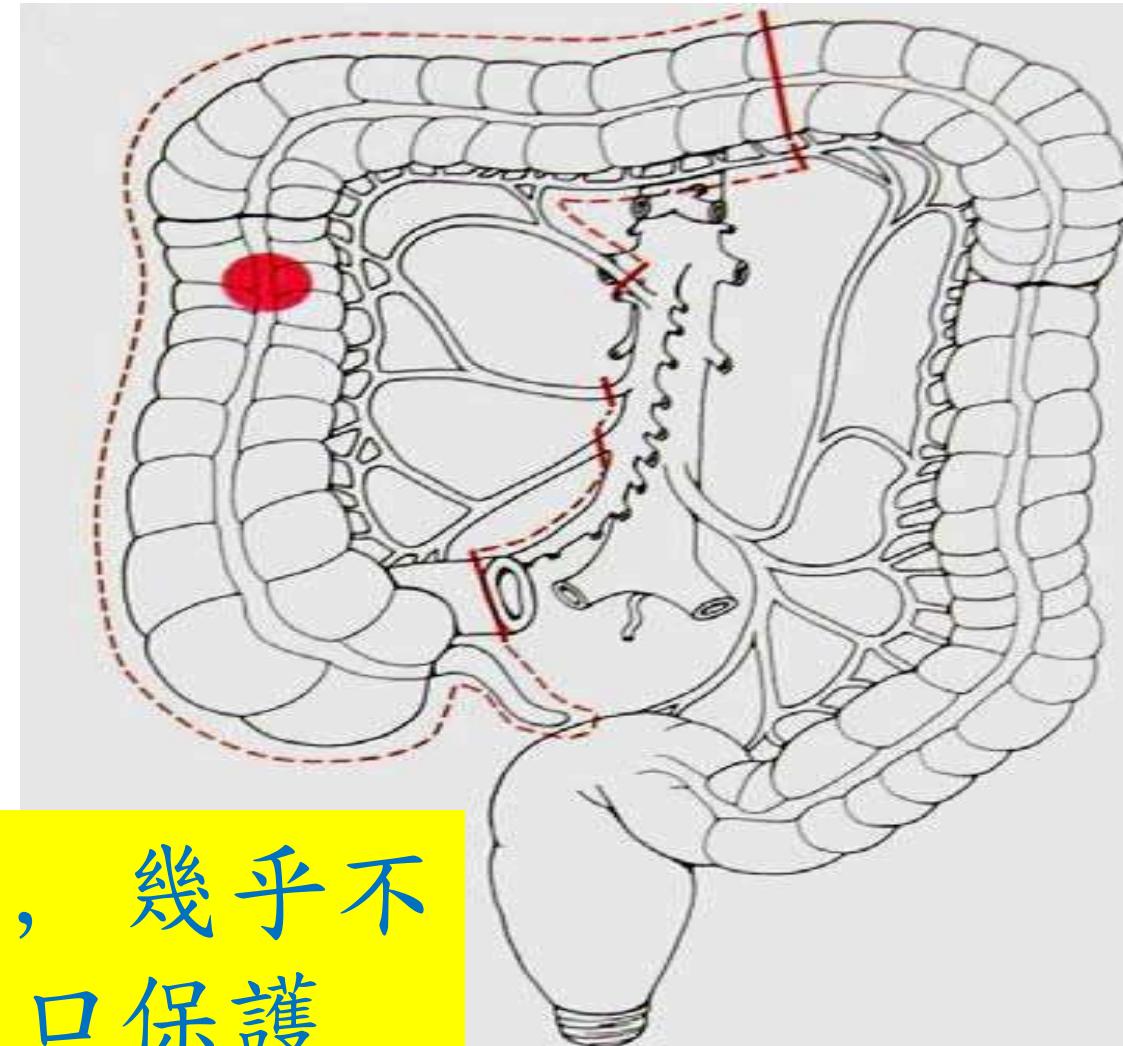

- 還是一樣，怕leak !!!
 - 術前colon因阻塞而非常漲
 - 病人太多內科的co-morbidity
 - Liver cirrhosis
 - ESRD (End-stage renal disease)
 - 年紀太大
 - Anastomosis太低
 - 低位直腸癌
 - 術前，術中或者術後生命徵象不穩...

常見的大腸術式

Right hemi-colectomy

23-32 Extent of resection for carcinoma in the ascending colon.

23-33 Extent of resection for carcinoma in the cecum.

血流很豐富，幾乎不需要術後造口保護

Left hemi-colectomy

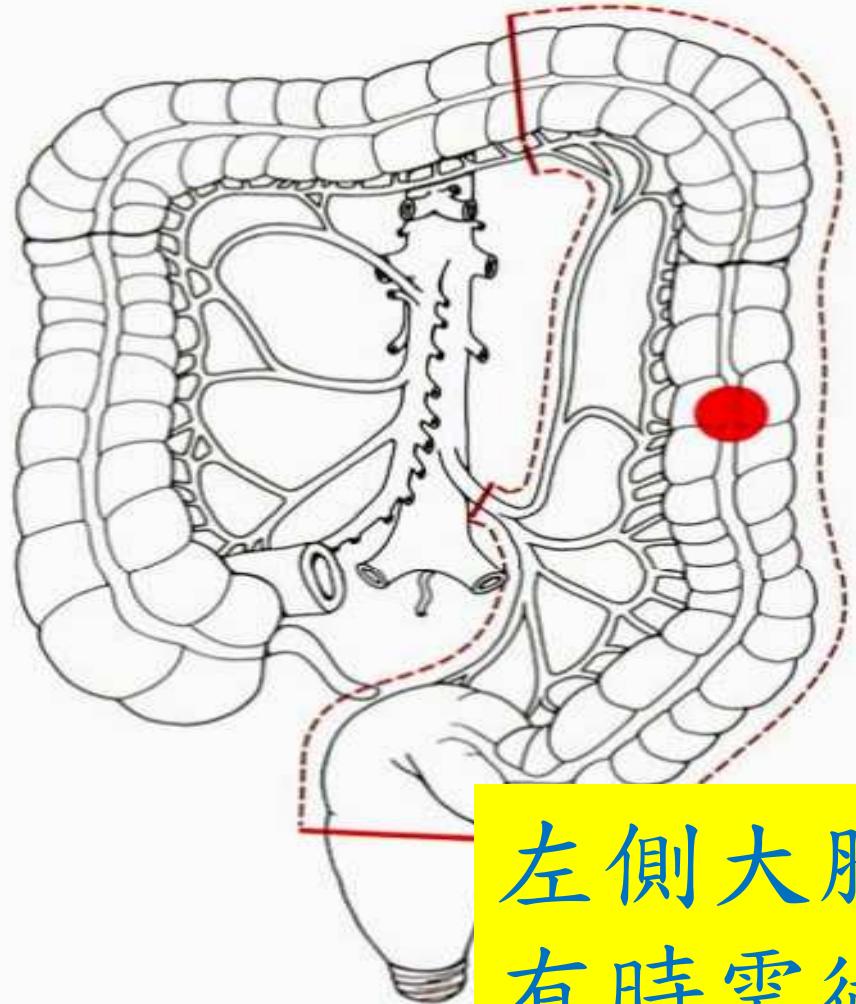

Fig. 23-37 Extended resection for carcinoma in the sigmoid colon.

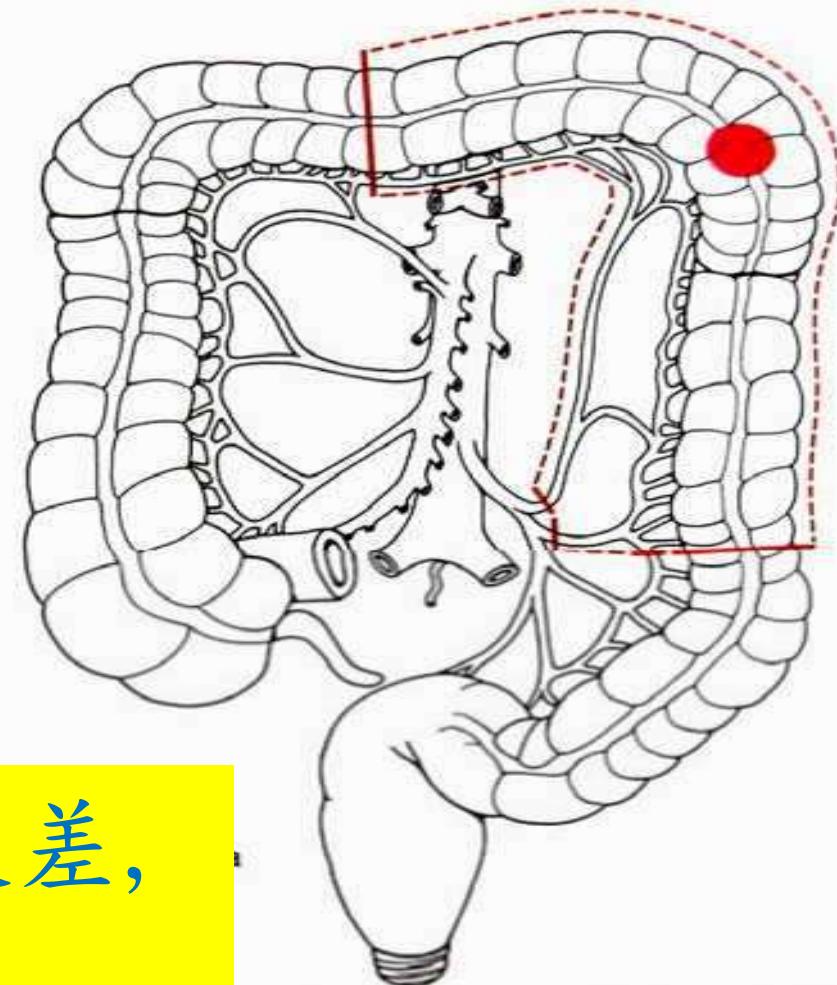

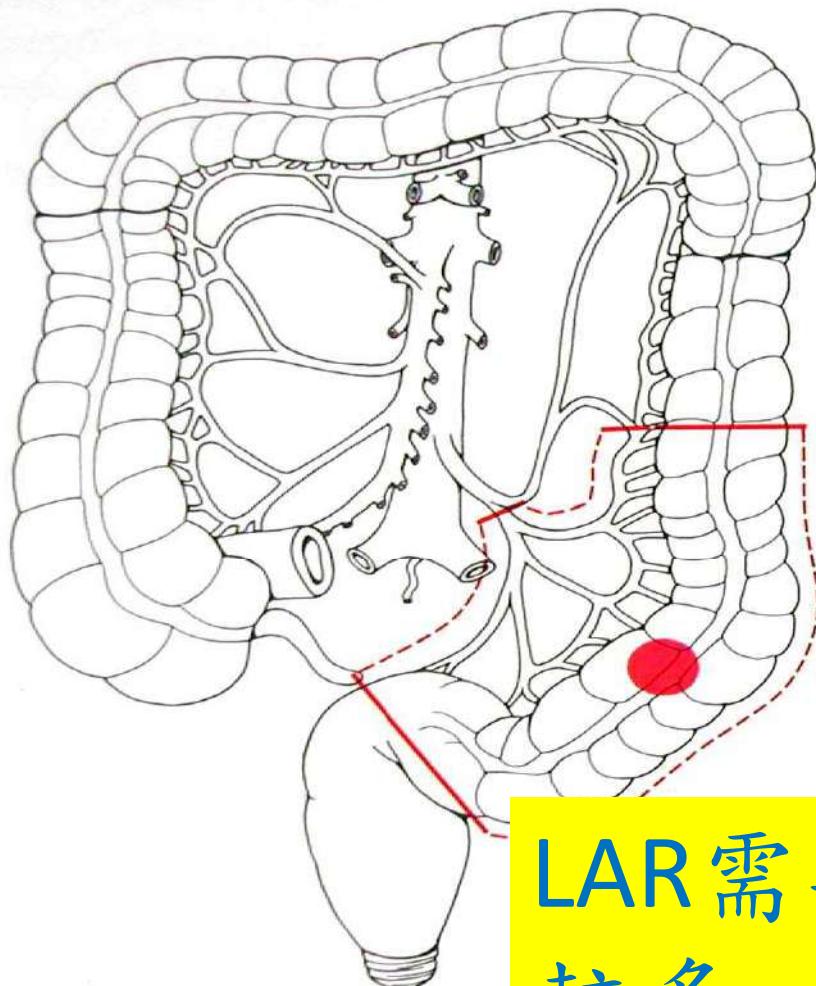

Fig. 23-38 Extent of resection for carcinoma in the splenic flexure.

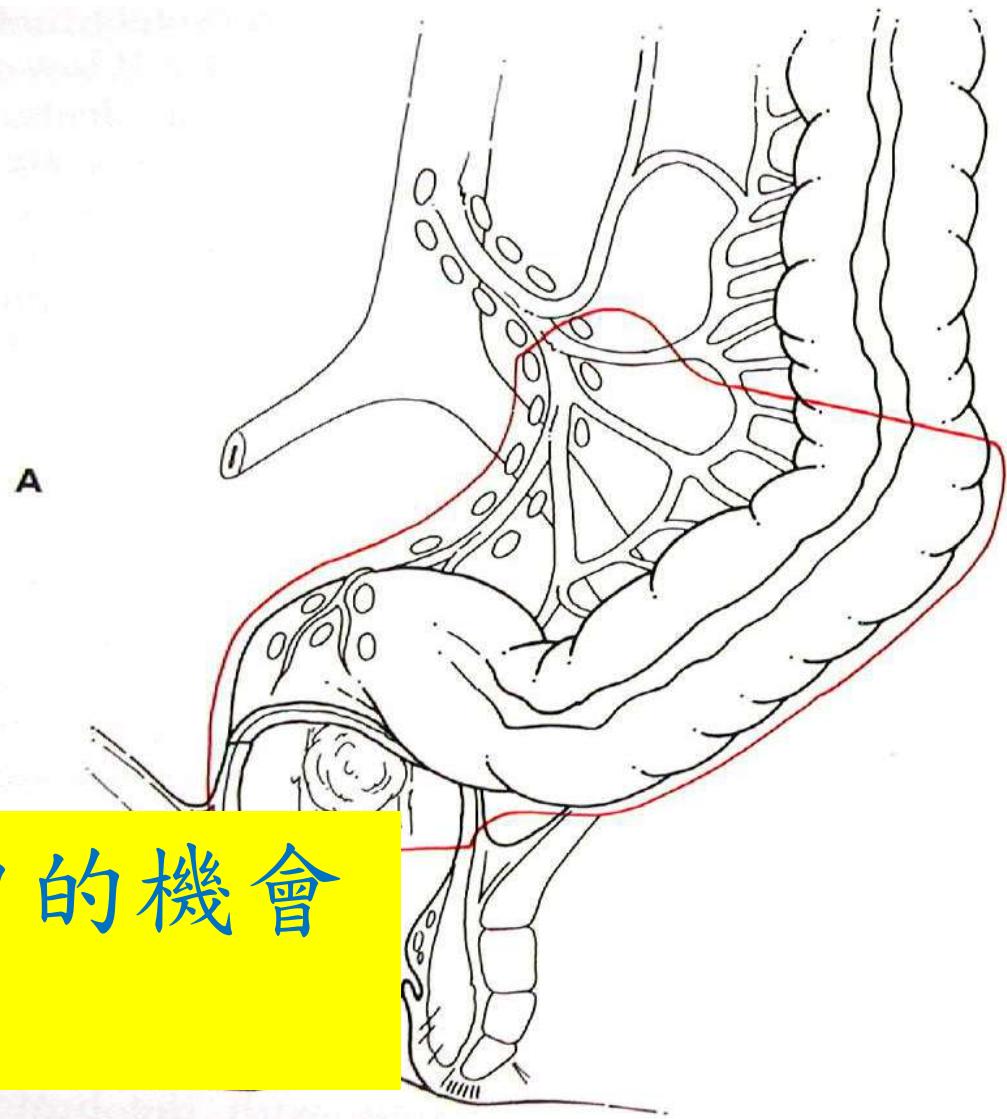

左側大腸血流較差，
有時需術後造口

Sigmoid & LAR(low anterior resection)

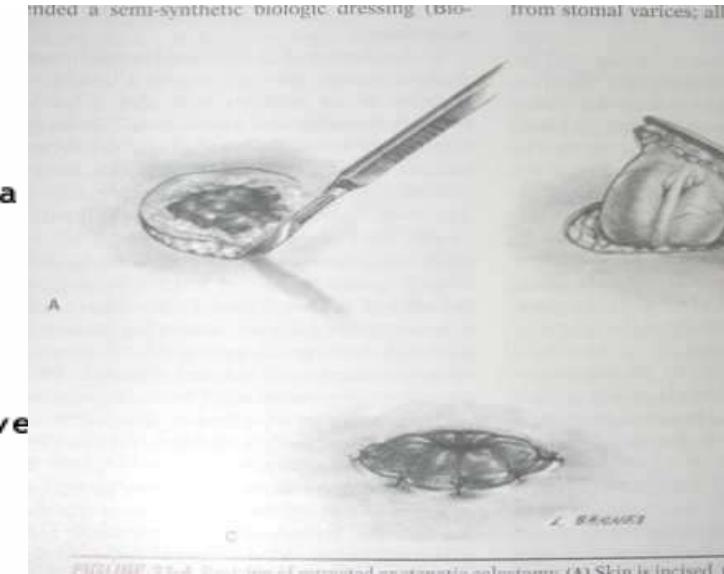

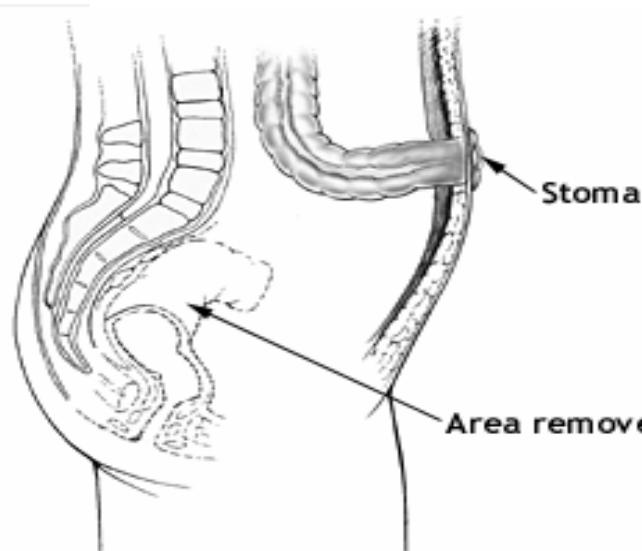

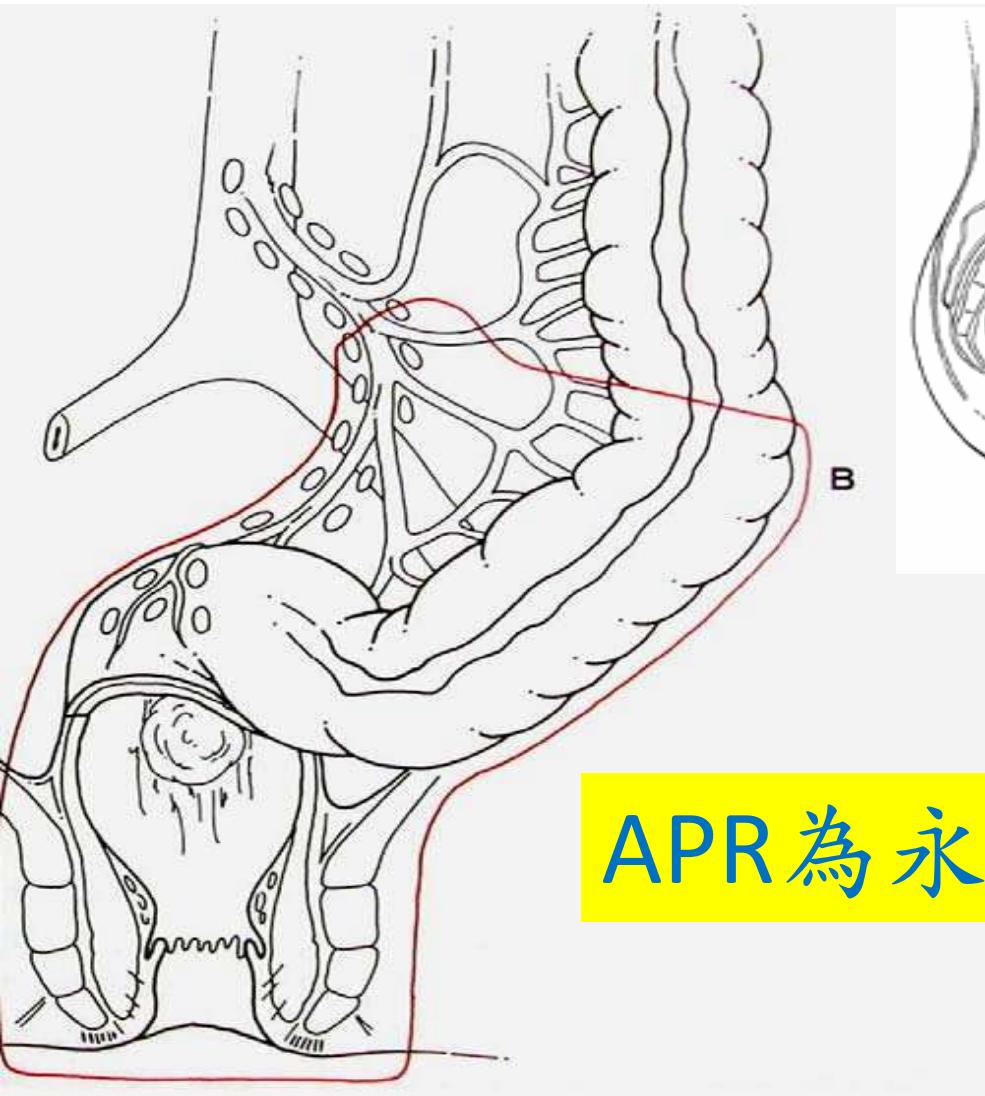

LAR需要造口的機會
較多

23-36 Extent of resection for c
n.

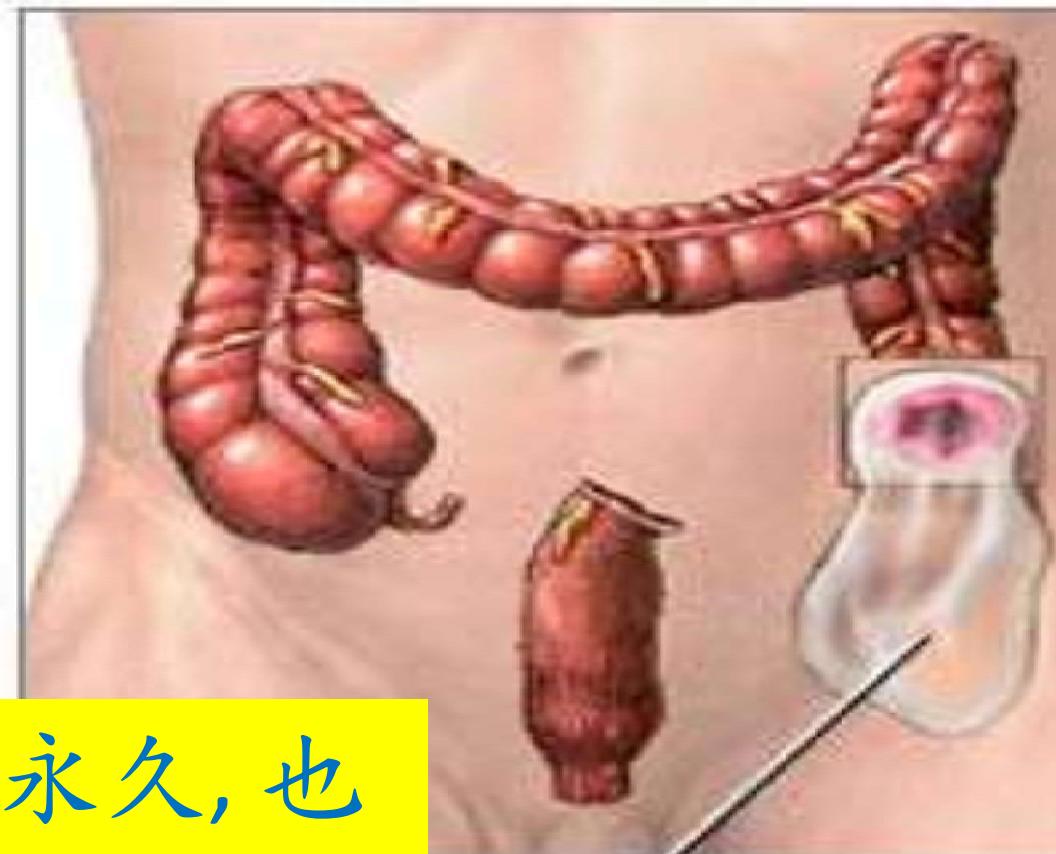

APR(abdomino-perineal resection)

APR為永久之造口

Hartmann's procedure

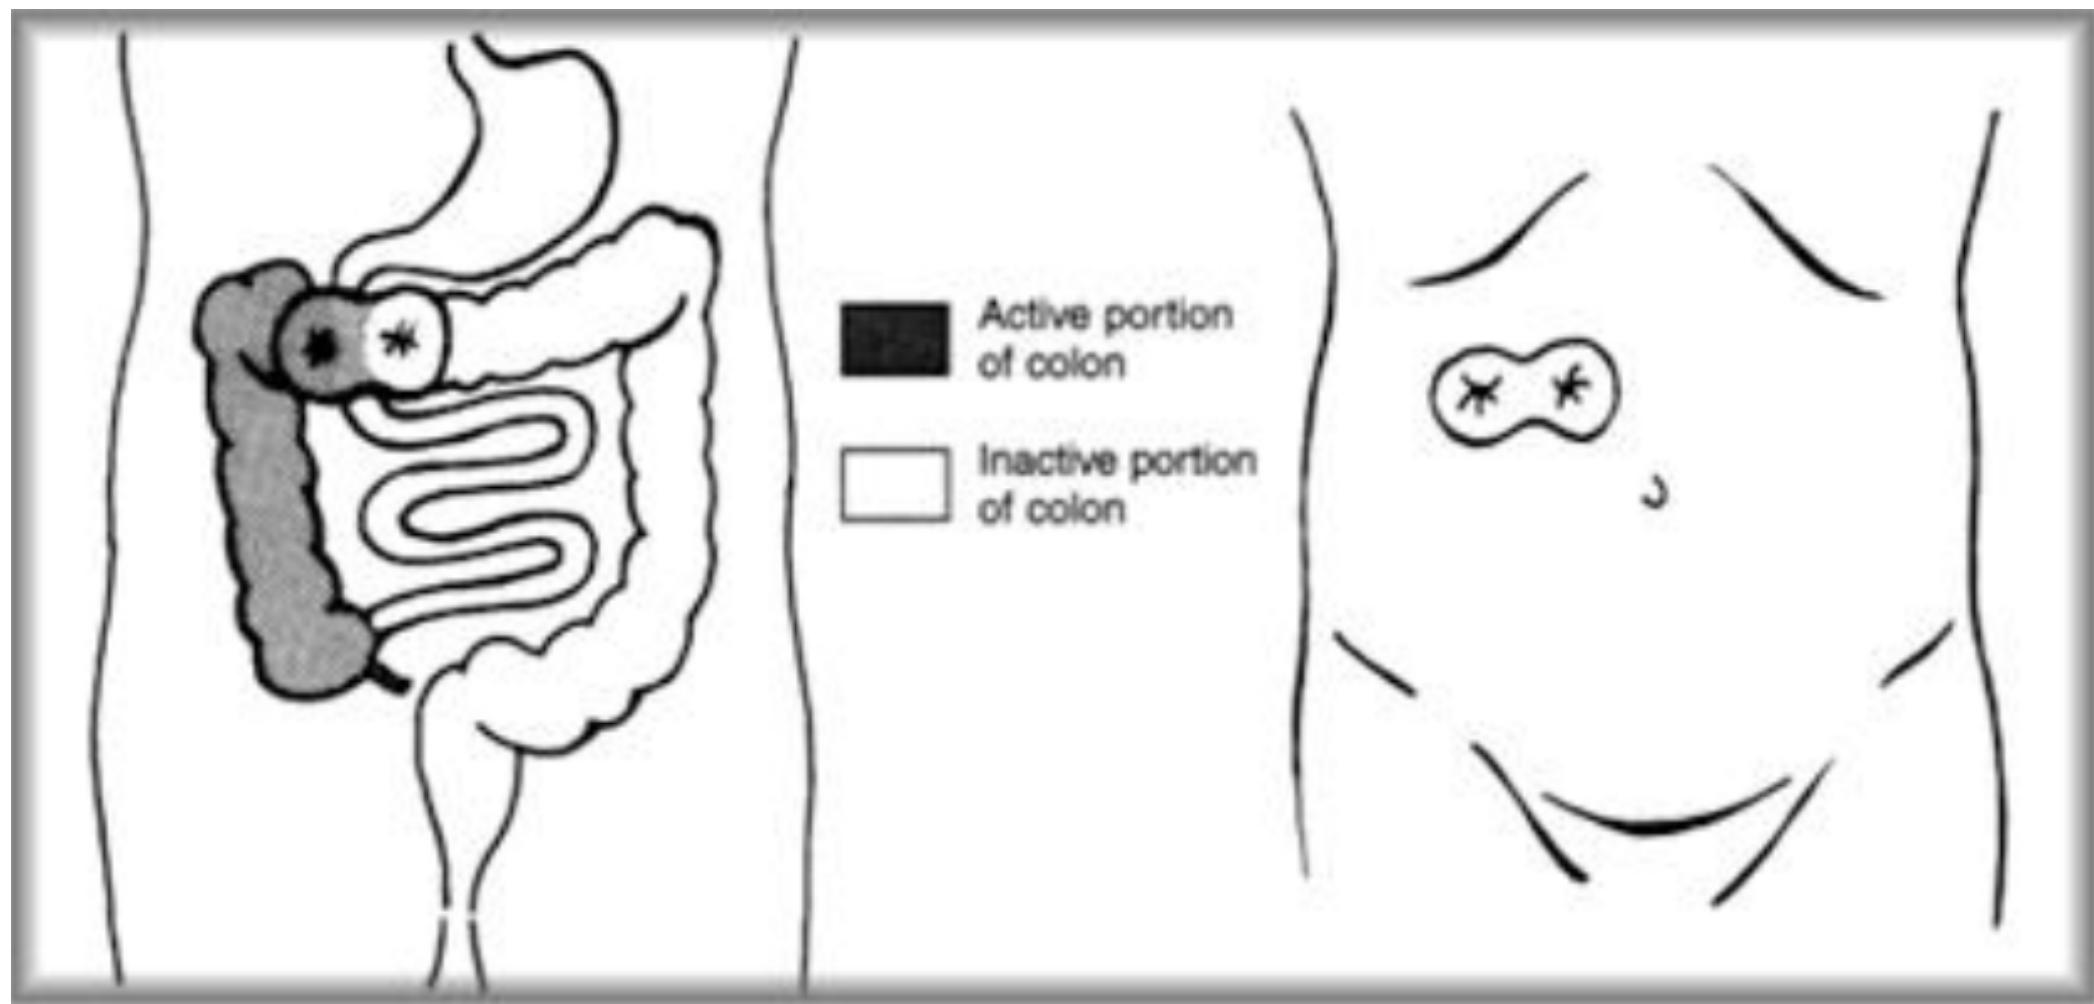

造口可以是永久，也
可以是暫時的

bag

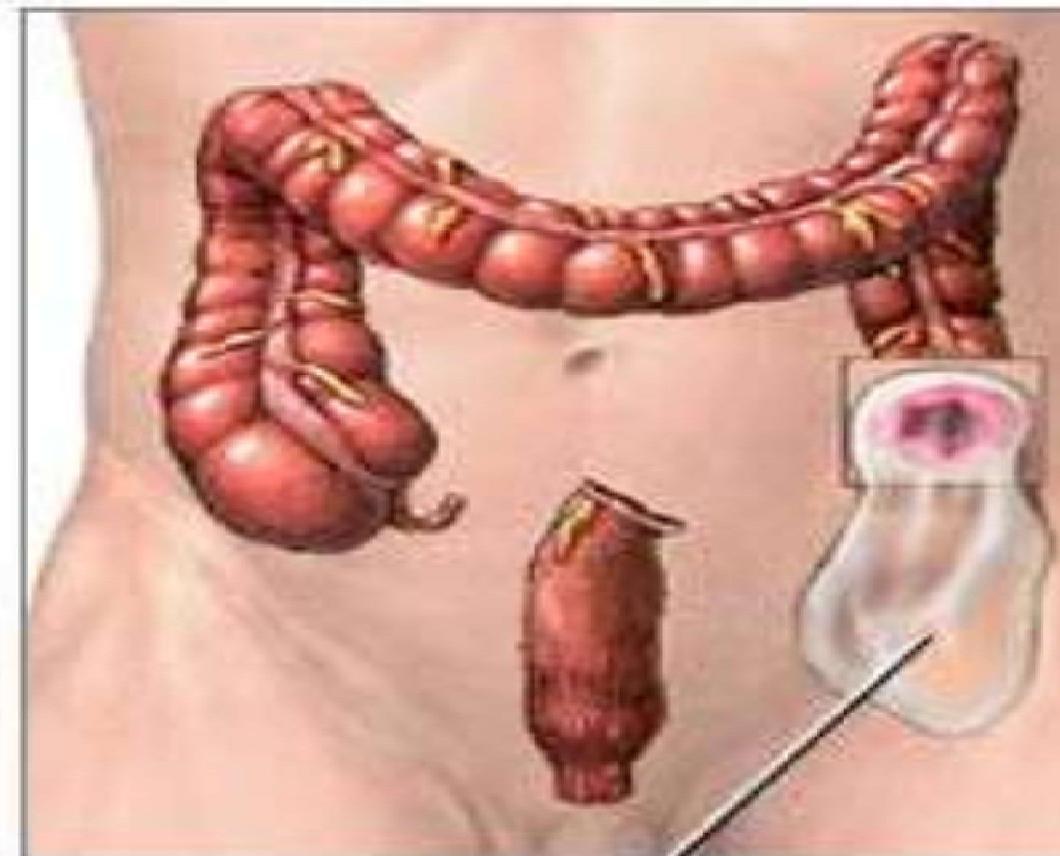

觀念No.1

End-colostoma跟Loop colostoma
take-down的方式有什麼不同？

T-loop colostoma

Hartmann's procedure

Colostomy bag

觀念No.2

Colon cancer完全阻塞治療的方式

Colon cancer with total obstruction

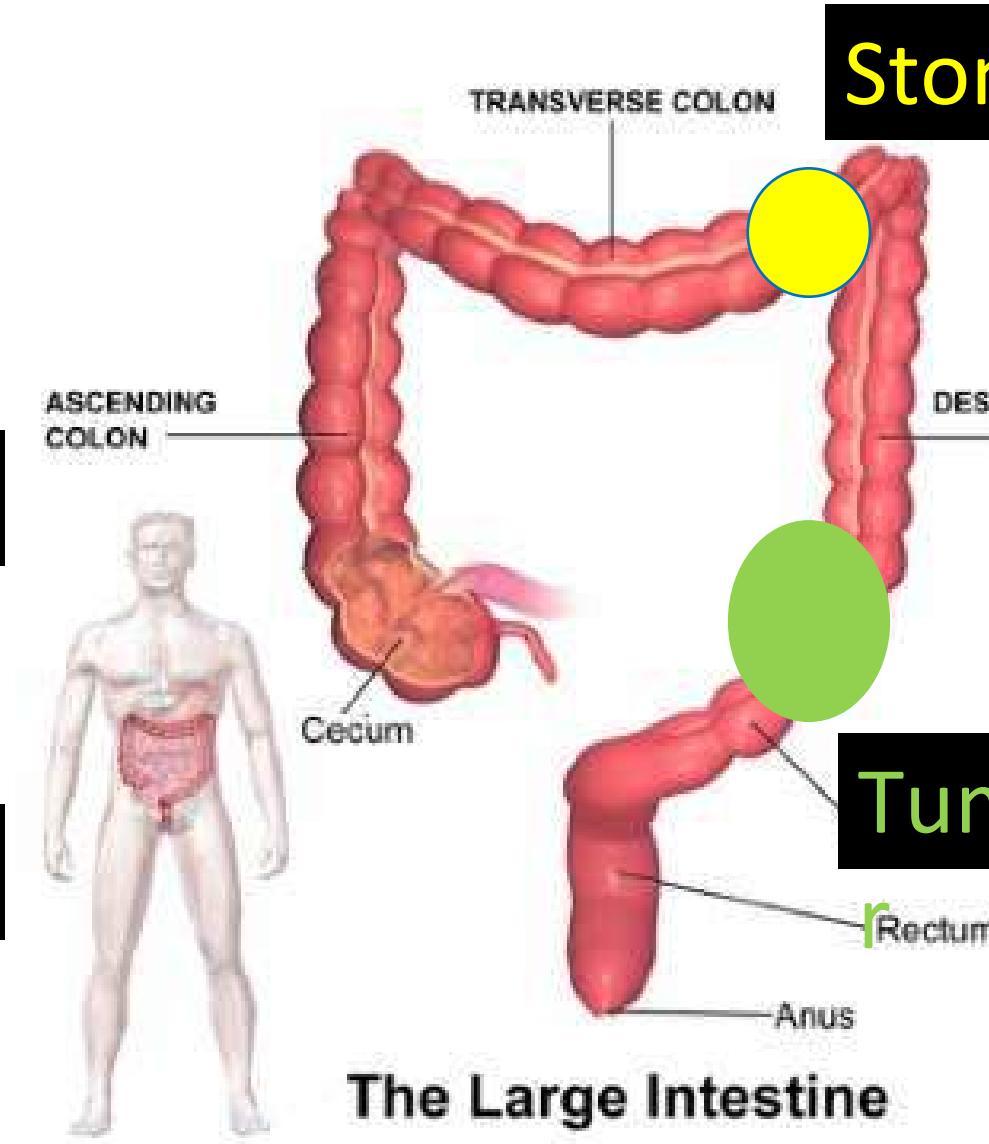

3 stages treatment

VS.

2 stages treatment

3 stages treatment

- 1st operation
 - Decompressive colostomy
- 10-14 days later...***
- 2nd operation
 - Curative resection → Laparoscopic or open
 - Left hemicolectomy
 - Sigmoid colectomy
 - LAR
- 3 months later...***
- 3rd operation
 - Colo-stoma take down

2 stages operation

- 1st + 2nd operation
 - OPEN curative resection + intra-OP colon irrigation
 - 因為病人肚子很漲，再加上術中洗腸子清理糞便，通常也只能open手術
 - Need diverting colostoma to protect anastomosis from leakage
- 3rd operation ***3 months later...***
 - Colostoma take down

Alternative 2 stages operation

- 1st operation
 - Decompressive colostomy
- 10-14 days interval
 - FFP transfusion
 - Parenteral nutrition support
 - Stoma decompression
- 2nd + 3rd operation
 - Curative resection + colostoma take down
 - 因為已經有了colostoma for decompression，腸子已經不漲，可以好好的colon preparation
 - 可以LAPAROSCOPIC approach
 - 此時take down手術後的leak機率已經降低

10-14 days later...

Case

許0菱

1064-01X

- 49 y/o
- Admission on 2017-07-15
- Discharge on 2017-08-07
- Past history
 - Medical history
 - HTN(-), type II DM(-)
 - Surgical history
 - Denied operation before
- Alcohol(-), Betel nut(-), Cigarette(-)

History summary

- 2017-07-15
 - Sent to ER due to abdominal fullness
 - KUB
 - Abdominal CT with/without contrast
 - Admission
- 2017-07-17
 - Panendoscopic exam
- 2018-07-19 Colonoscopic exam + biopsy

Pathological report

- PATHOLOGIC DIAGNOSIS
 - Intestine, large, colon, 50 cm. from anal verge, endoscopic biopsy.
 - Adenocarcinoma

LUQ T-loop colostomy

2017-07-21

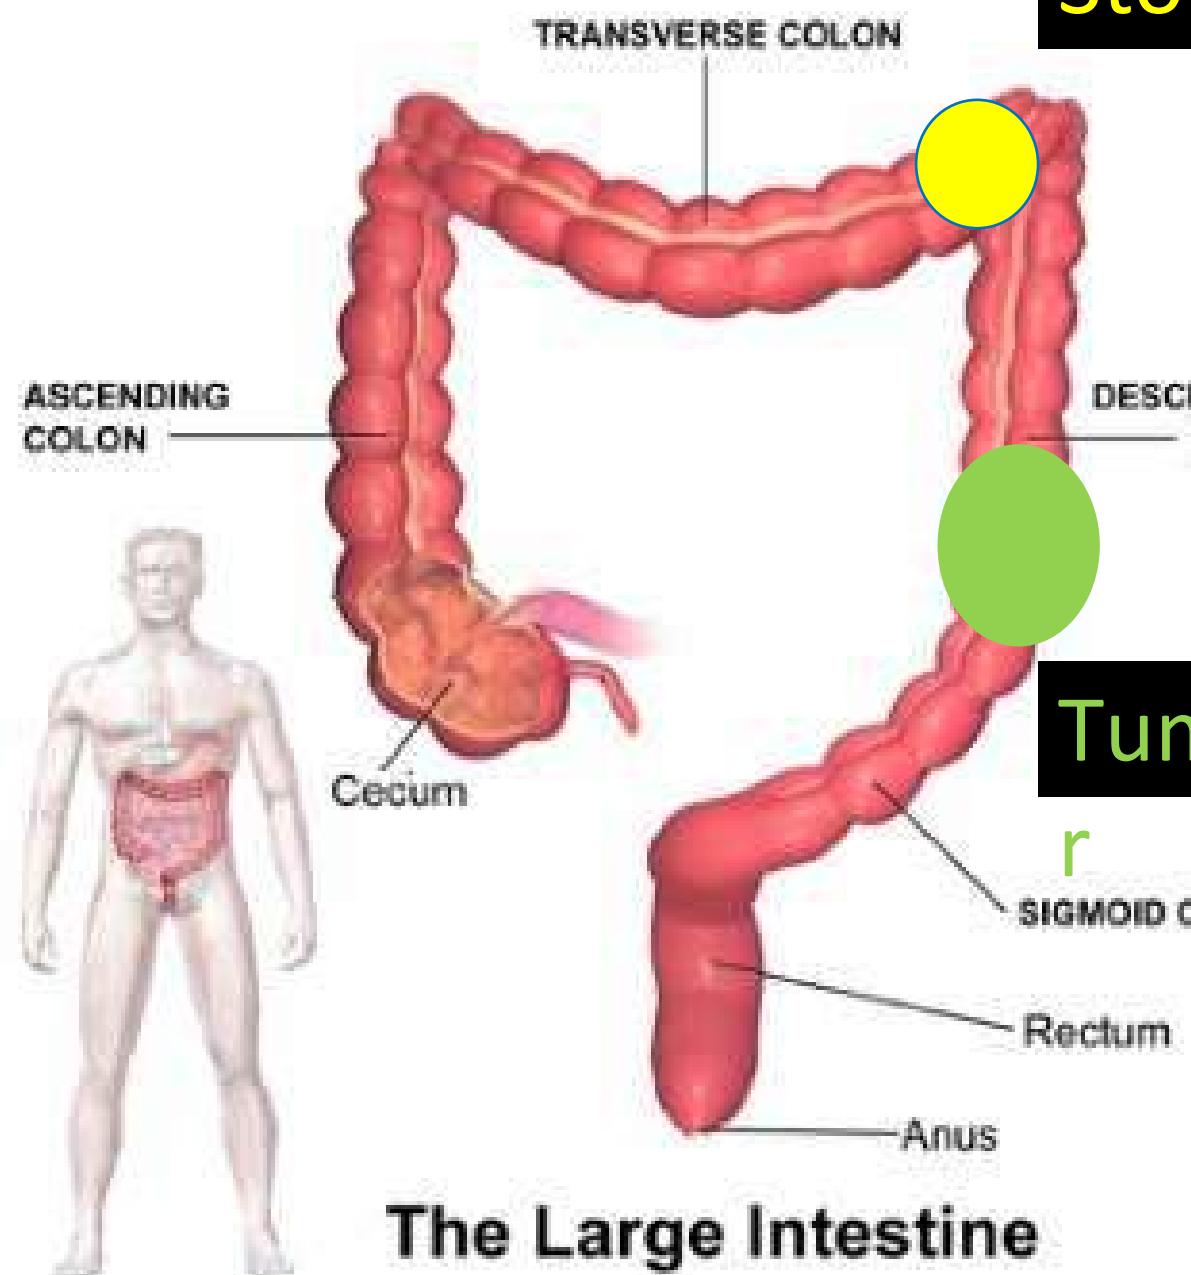

1st operation

Diagnosis

Descending colon adenocarcinoma with total obstruction

2017/07/21

Between 1st and 2nd operation...

- On clear liquid diet
- FFP x 2 units BID transfusion
 - To reduce colon wall edema
- Parenteral nutrition support
 - Bluid(1000mL) 1 pack QD IVD
- Arrange HRCT for excluding lung metastasis
- 2 days before 2nd operation
 - Start colon preparation

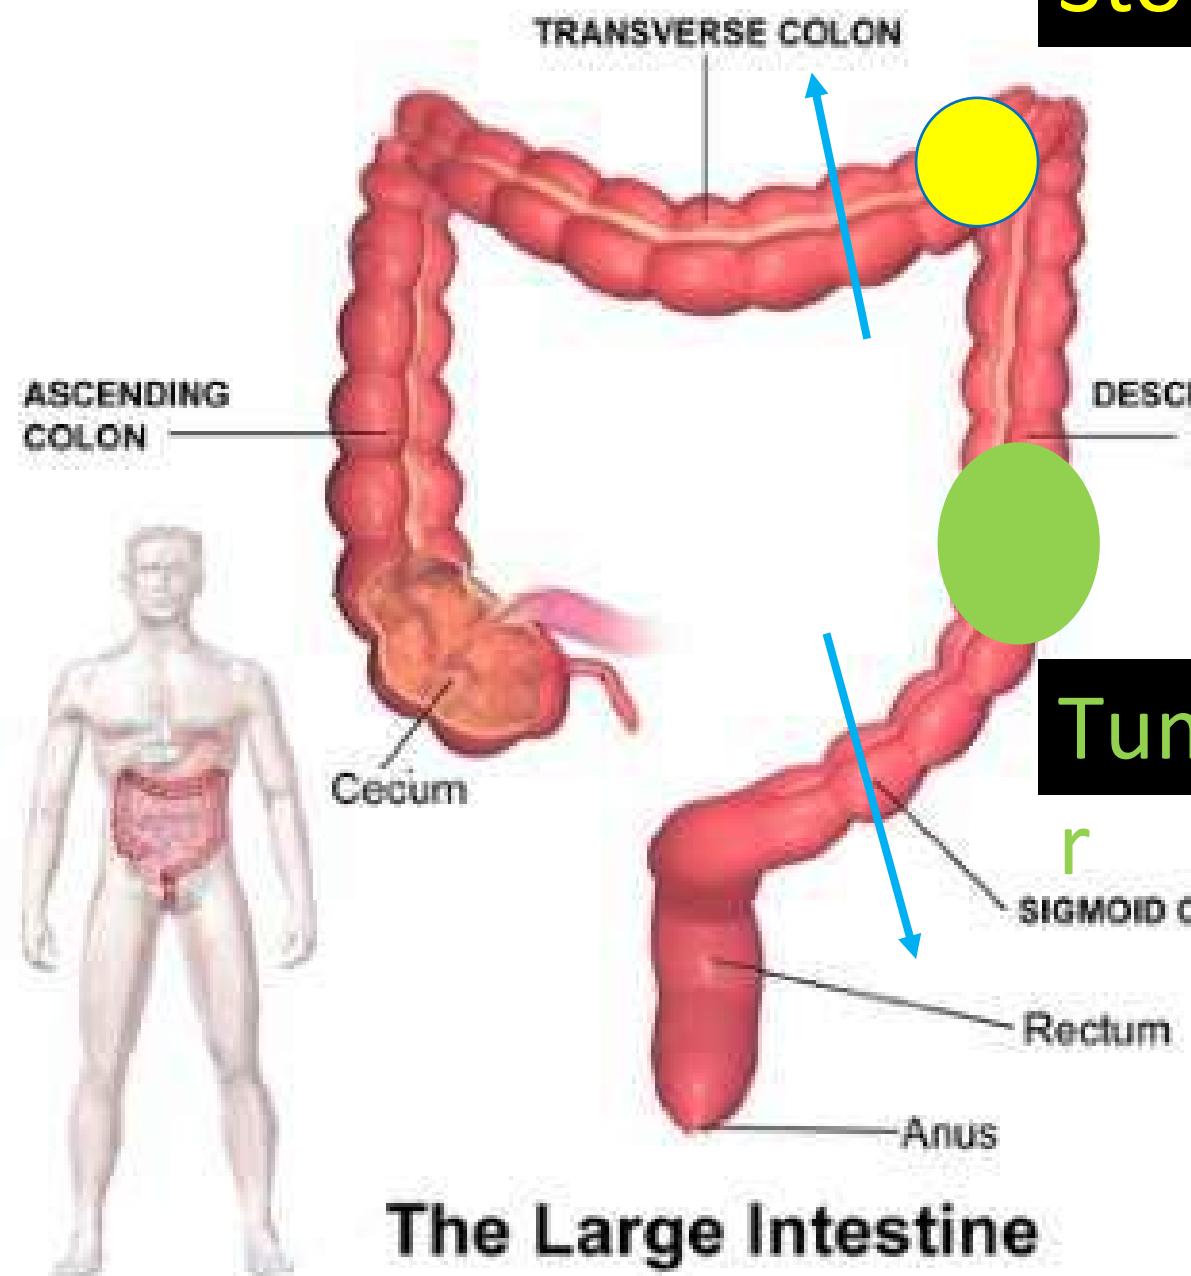

Laparoscopic left hemicolectomy + LUQ T-loop colostoma take down

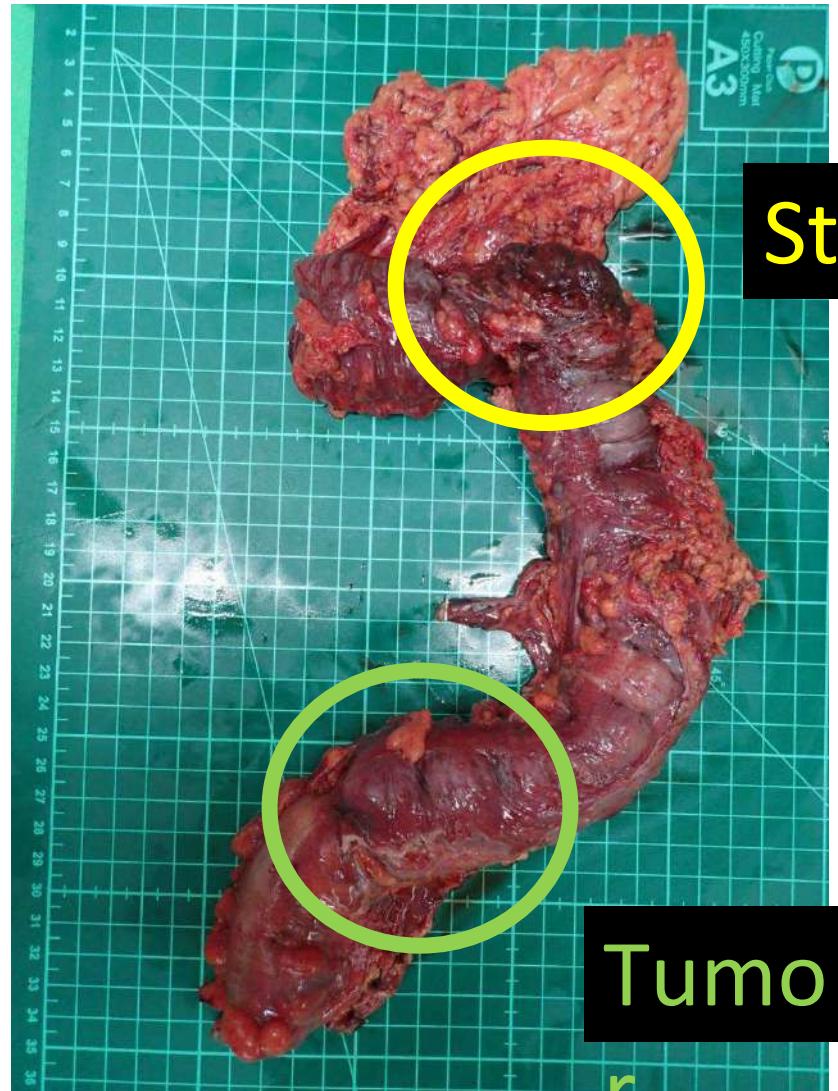

2017-07-31

2nd operation

Diagnosis

Descending colon adenocarcinoma with total obstruction s/p LUQ T-loop colostomy

Stoma

Tumor

r

Course after operation...

- Post-OP transfer to AICU
- 2017-08-01, POD-1
 - Remove NG
 - Transfer to general ward
- 2017-08-03, POD-3
 - Sip water
 - Remove Foley
- 2017-08-04, POD-4
 - On clear liquid diet

Course after operation...

- 2017-08-05, POD-5
 - On liquid diet
- 2017-08-06, POD-6
 - On soft diet
- 2017-08-07, POD-7
 - Remove J-P drain
 - Discharge and follow up at OPD

Pathological report

- PATHOLOGIC DIAGNOSIS
 - Intestine, D-colon, left hemicolectomy (LH)
 - Adenocarcinoma, moderately differentiated, invaded into pericolic soft tissue
 - Surgical margin, bilateral and CRM, LH
 - Free of malignancy
 - Lymph nodes, regional (4/16), IMA (0/1), dissection
 - Metastatic adenocarcinoma (4/17)
 - Intestine, colon, colostomy take down
 - Fibrosis
- Final stage pT3N2aM0

有stoma的缺點？

1. Stoma也有complication!
2. 病人主觀的感受...

常見的造口併發症

- 造口周圍皮膚發炎
- 造口狹窄 (stenosis)
- 造口腸段脫出 (prolapse)
- 造口周圍疝氣 (hernia)

Prolapse & Hernia

 - Surgical history
 - Denied operation before
- Alcohol(-), Betel nut(-), Cigarette(-)

S-loop colostomy

2017-12-02

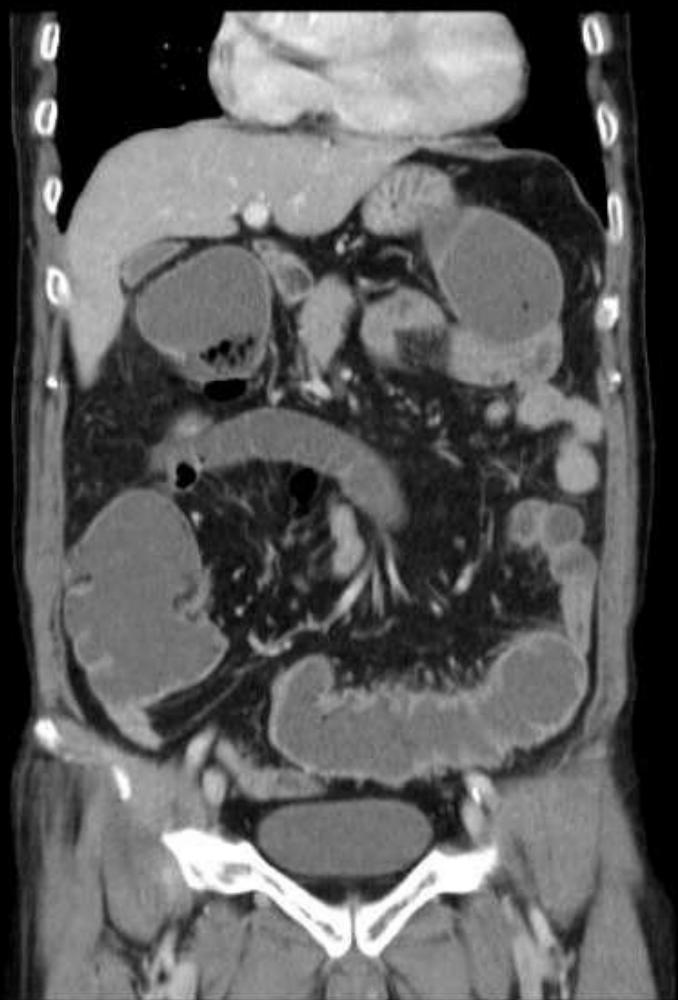

1st operation

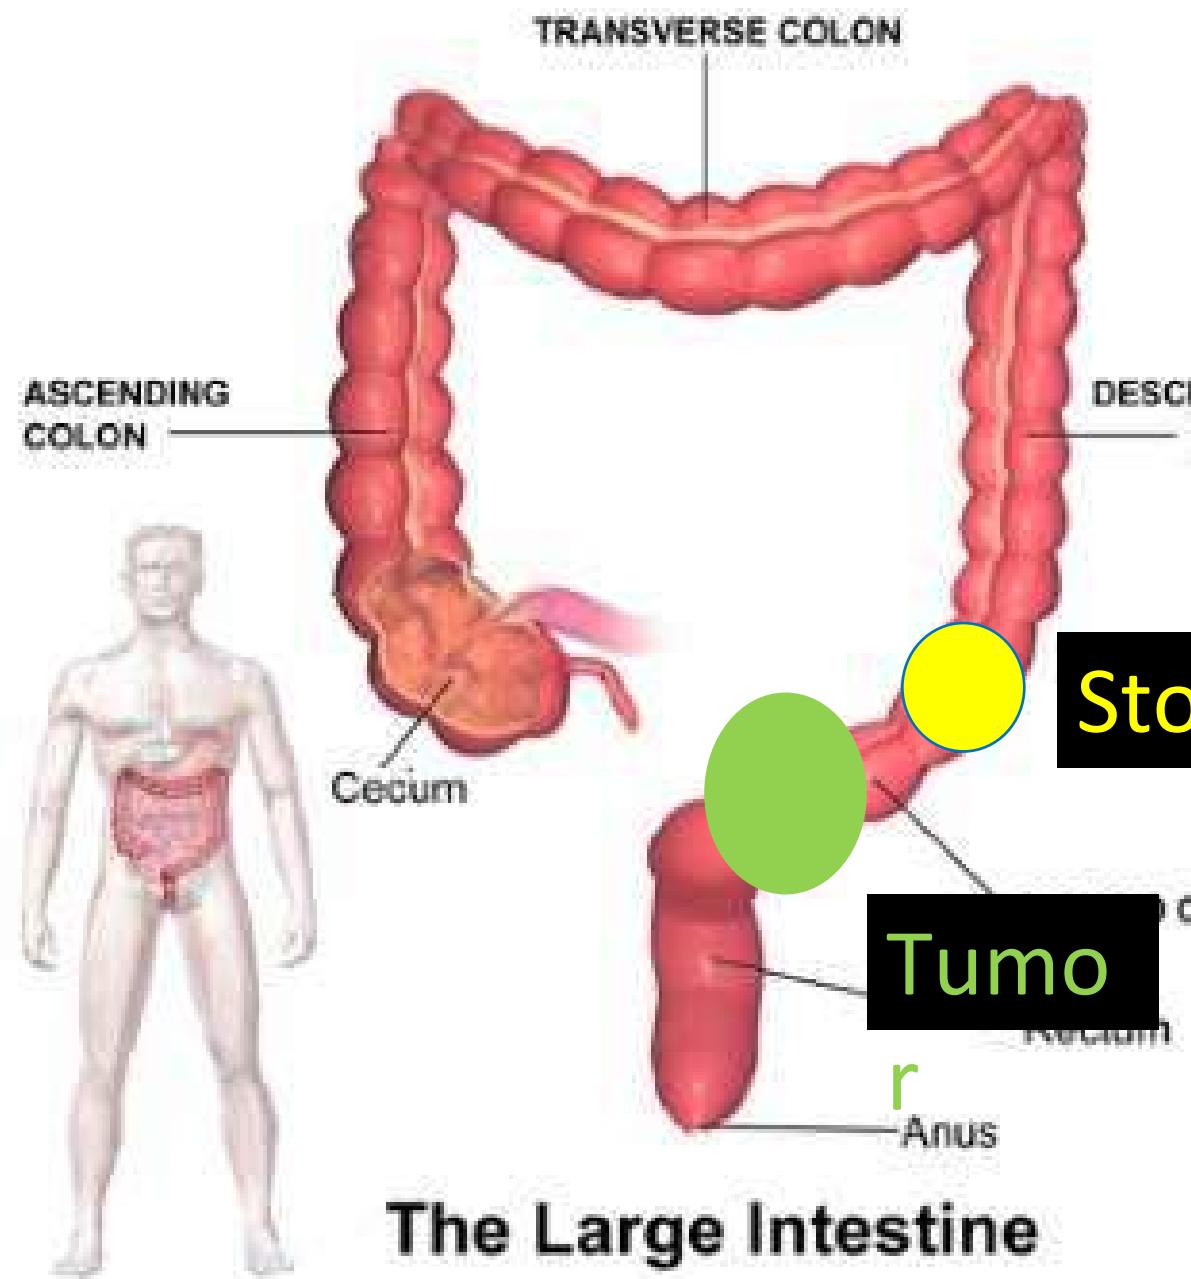

Diagnosis

Sigmoid colon adenocarcinoma with total obstruction

Extremely
distended !!

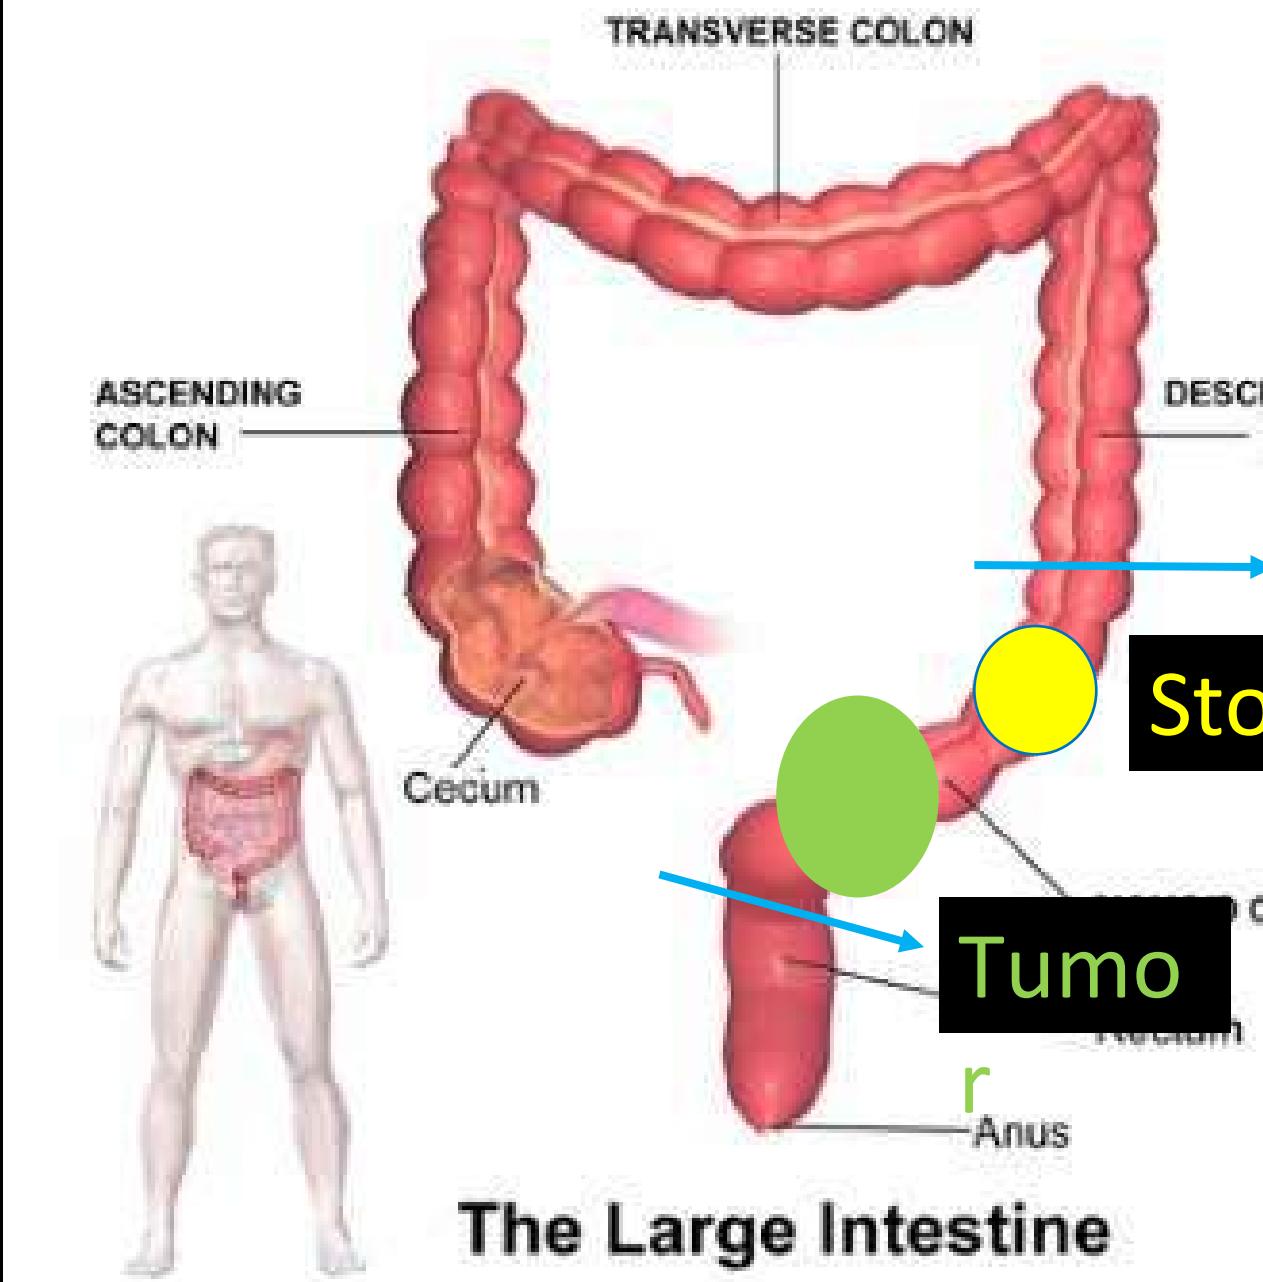

Laparoscopic sigmoid colectomy + small bowel segmental resection + S-loop colostoma take down

2017-12-14

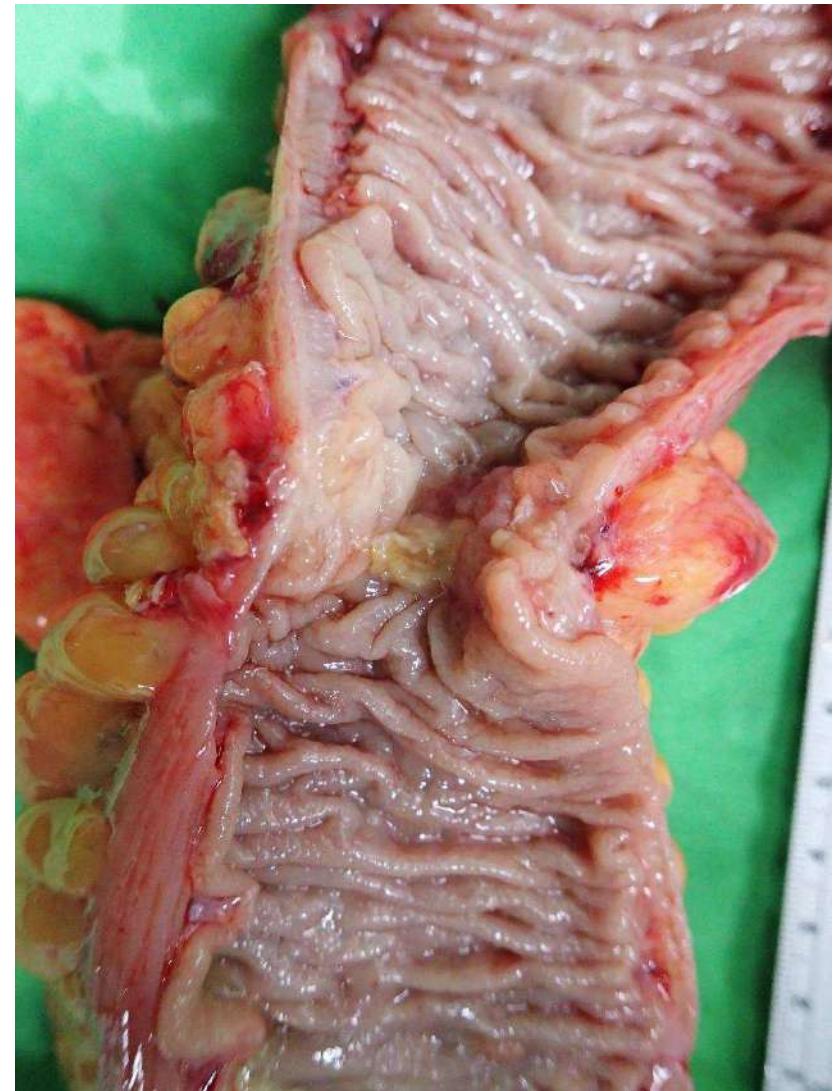

2nd operation

Diagnosis

Sigmoid colon adenocarcinoma with total obstruction s/p S-loop colostomy

Course after operation...

- Post-OP transfer to AICU
- 2017-12-15, POD-1
 - Transfer to general ward
- 2017-12-16, POD-2
 - Remove NG
- 2017-12-18, POD-4
 - Remove Foley
 - Sip water

Course after operation...

- 2017-12-19, POD-5
 - Remove anal tube
- 2017-12-20, POD-6
 - On clear liquid diet
- 2017-12-21, POD-7
 - On liquid diet
- 2017-12-22, POD-8
 - On soft diet
- 2017-12-26, POD-12
 - Remove J-P drain
 - Discharge and follow up at OPD

Pathological report

- PATHOLOGIC DIAGNOSIS
 - Intestine, large, sigmoid colon, sigmoid colectomy.
 - Adenocarcinoma, well differentiated, invading subserosa, pT3N0
 - Surgical margin, bilateral and radial, sigmoid colectomy.
 - Free of tumor
 - Intestine, small, segmental resection.
 - Free of tumor
 - Lymph node, regional, dissection.
 - Free of metastasis (0/10)
 - Soft tissue, labeled as "IMA LN", dissection.
 - Free of tumor
- Final stage **pT3N0M0**

Case presentation

- 64 y/o
- Admission on 2017-09-05
- Discharge on 2017-09-28
- Past history
 - Medical history
 - HTN(+), type II DM(-)
 - Surgical history
 - s/p left inguinal herniorrhaphy
- Alcohol(-), Betel nut(-), Cigarette(-)

S-loop colostomy + right inguinal herniorrhaphy

2017-09-08

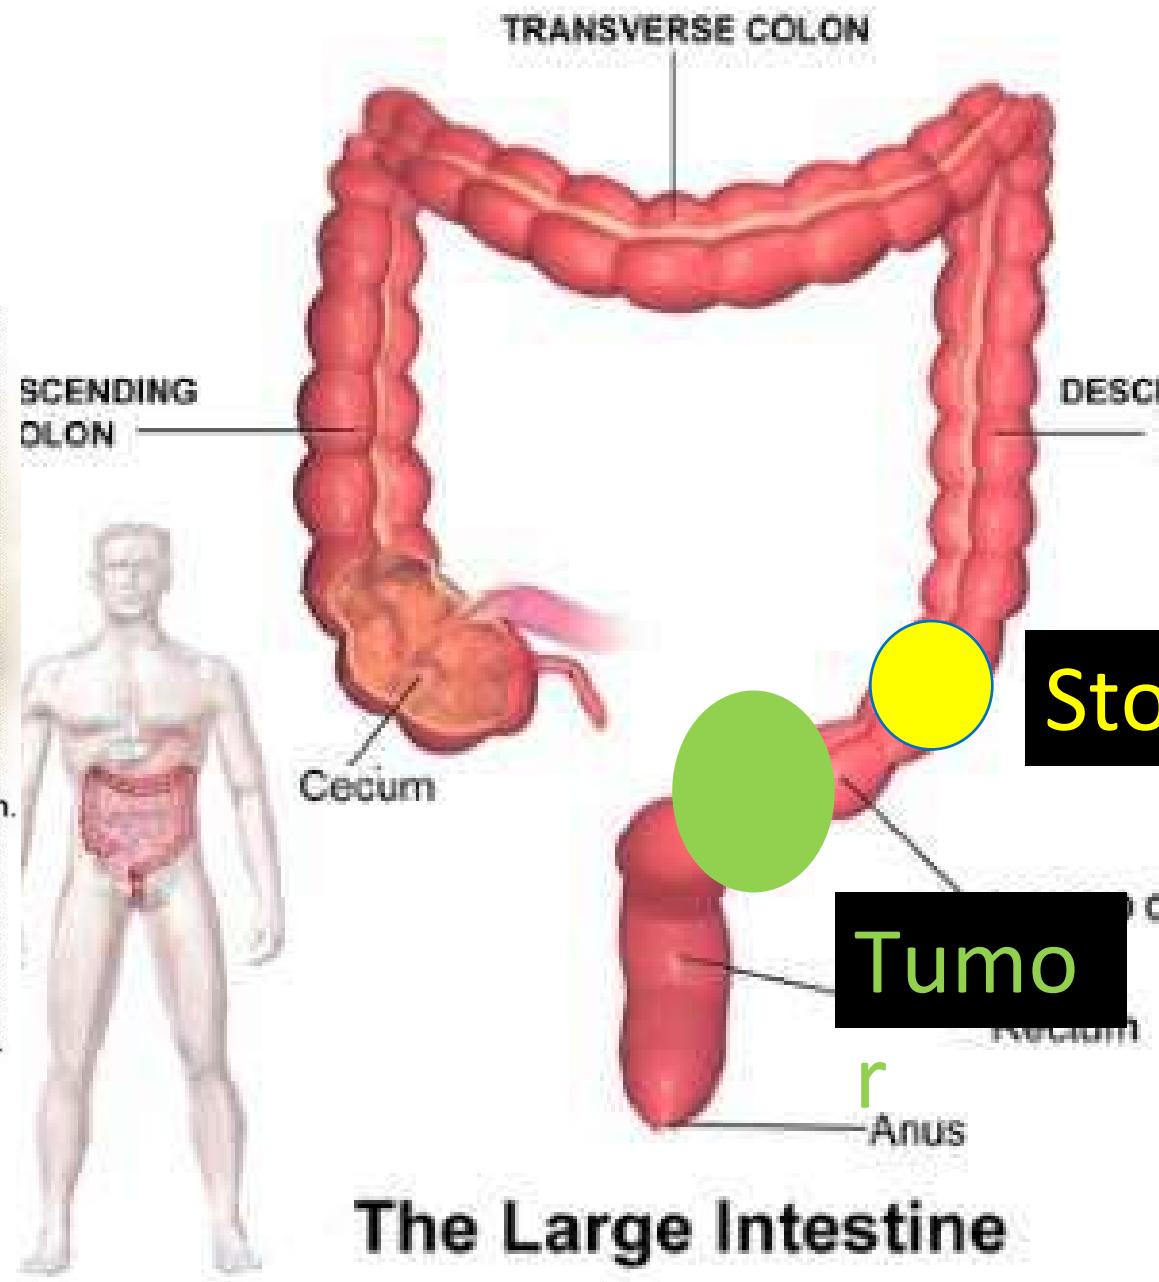

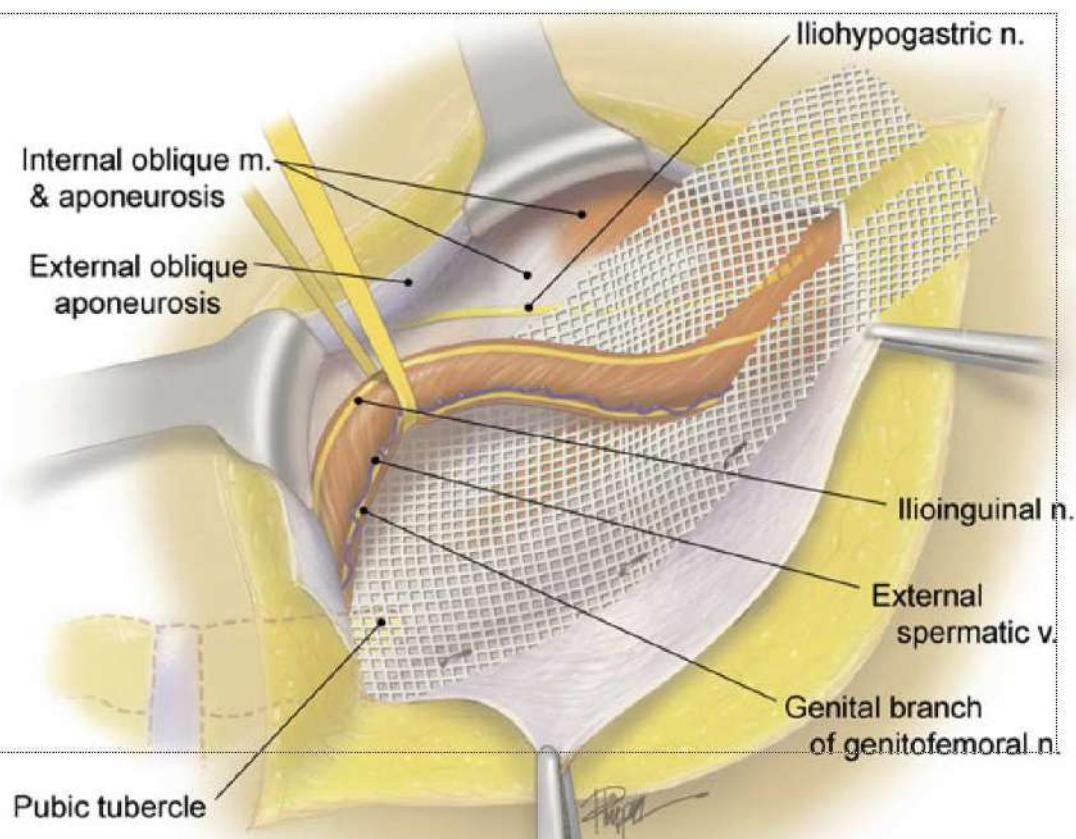

1st operation

Diagnosis

*Sigmoid colon adenocarcinoma with total obstruction + right inguinal
hernia*

Extremely
distended !!

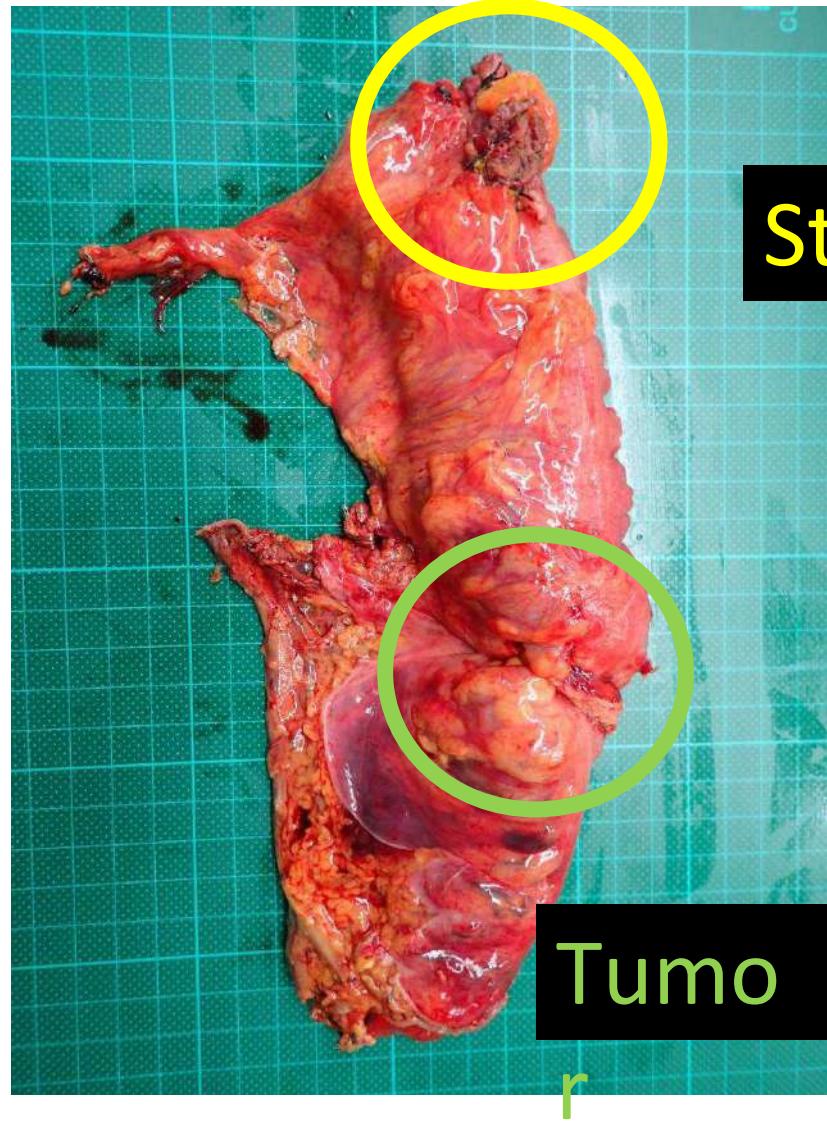

Laparoscopic sigmoid colectomy + S-loop colostoma take down

2017-09-18

2nd operation

Diagnosis

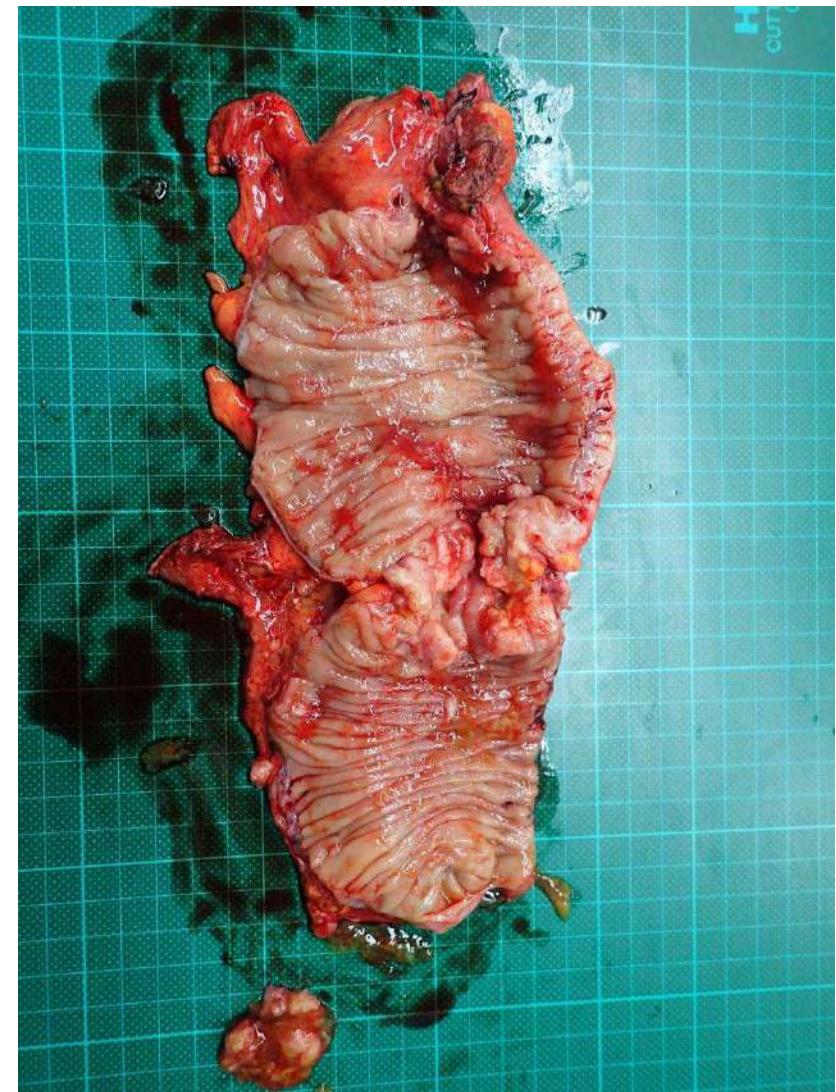

*Sigmoid colon adenocarcinoma with total obstruction s/p S-loop
colostomy*

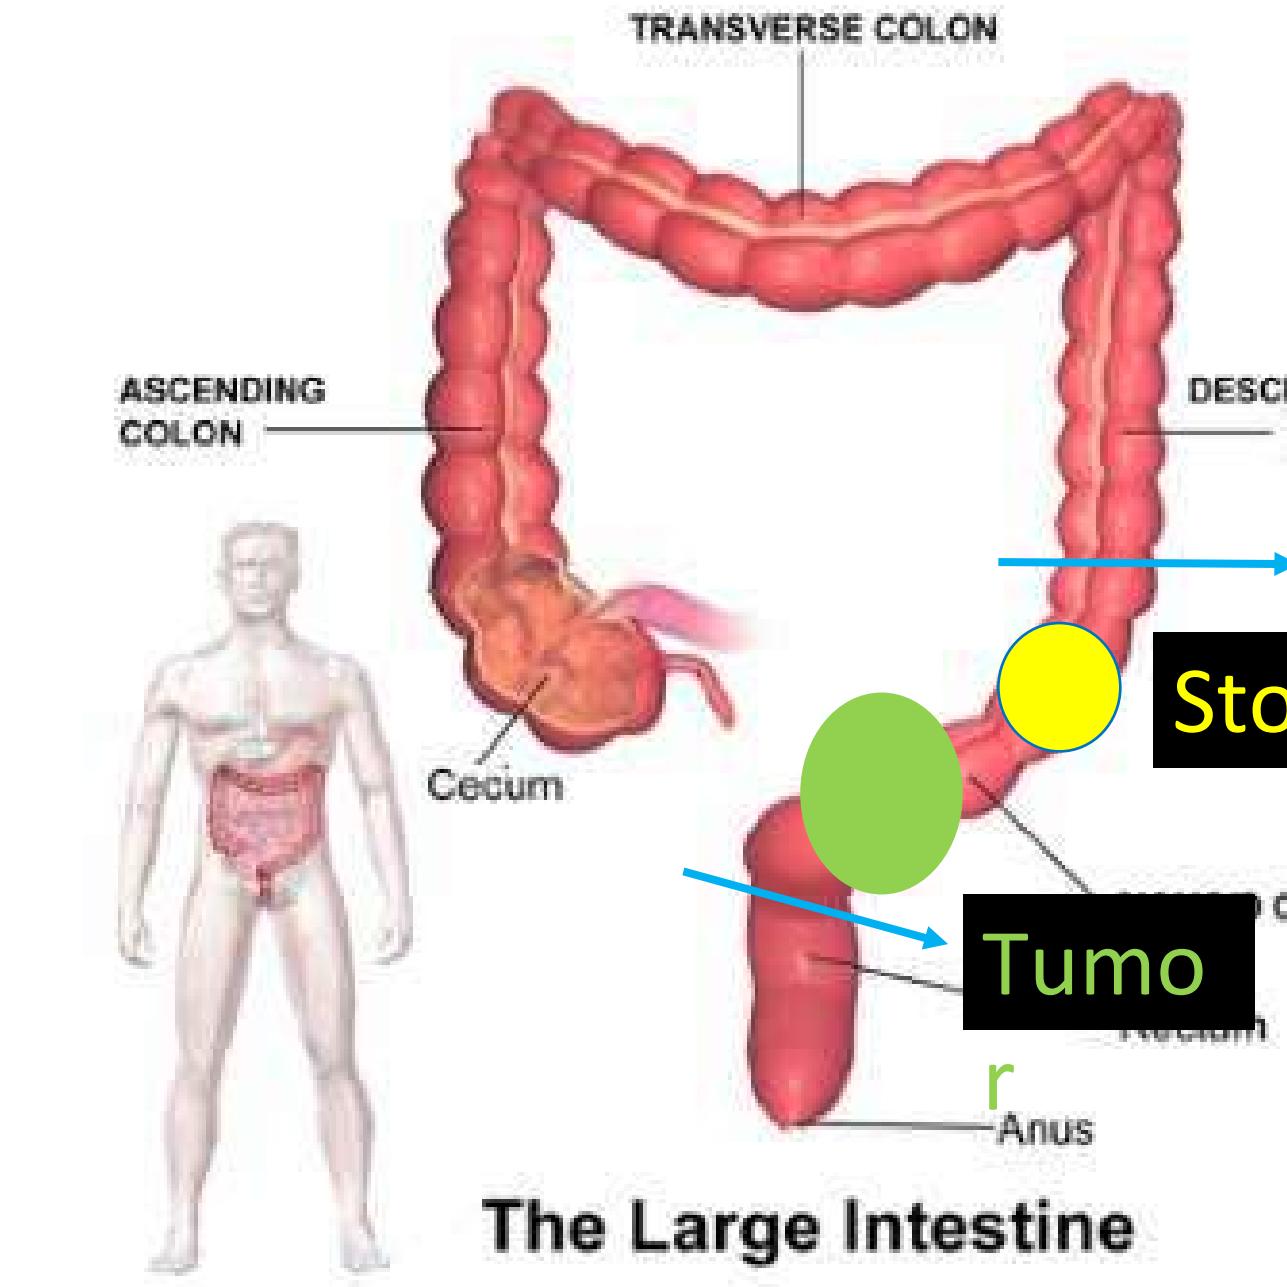

Stoma

Tumor

r

Course after operation...

- 2017-09-21, POD-3
 - Remove NG tube
 - Remove Foley
- 2017-09-22, POD-4
 - Sip water
- 2017-09-23, POD-5
 - Remove anal tube
 - On clear liquid diet
- 2017-09-24, POD-6
 - On liquid diet
- 2017-09-25, POD-7
 - On soft diet

Pathological report

- PATHOLOGIC DIAGNOSIS
 - Intestine, S-colon, sigmoid colectomy
 - Adenocarcinoma, G2, moderately differentiated, invaded into subserosa
 - Surgical margin, bilateral and CRM
 - Free of malignancy
 - Lymph nodes, regional, dissection
 - Metastatic adenocarcinoma (5/20)
- Final stage pT3N2aM0

Course after operation...

- 2017-09-26, POD-8
 - OP: Left IV port-A implant
- 2017-09-28, POD-10
 - Remove J-P drain
 - Discharge and follow up at OPD

Summary

- 為何需要stoma?
- 3 stages treatment
 - 最基本的觀念
- 2 stages treatment
 - Open approach
- Alternative 2 stages treatment
 - Laparoscopic approach

Thanks for your attention!
